Programming cable

USB cable

1

A magnified view of a web browser window. The address bar shows the URL <http://www.kysoh.com/Downloads>. The browser's menu bar includes "Marque-pages", "Outils", and "?". Below the menu bar, there are navigation tabs: "nouvelles", "CSS", "Forms", "Images", "Information", and "Miscellaneous". The main navigation area features a penguin logo, "Tux Droid", "Buy it", and a highlighted "Downloads" button with a mouse cursor. Below the navigation, there is a language selector (French flag) and a section titled "Tux Droid companion" with a sub-section "Downloads". The main content area contains two sections: "Read the tutorial" with a sub-header "A tutorial has been created to help you in the installation. You'll find it here." and "Download the installer" with a sub-header "Welcome to the download page" and a partially visible sentence "Installation is very easy".

Go to <http://www.kysoh.com/Downloads/>

2

Read the tutorial

A tutorial has been created to help you in the installation.
You'll find it here.

Download the installer

Welcome to the download page

The installation is very easy, plug and play, we can even say.
You'll have to follow some short steps to get your installation done.
Have fun and feel free to contact us through the forum or by e-mail.

Chose your OS

- [Windows \(XP/Vista\)](#)
- [Linux](#)

More languages?

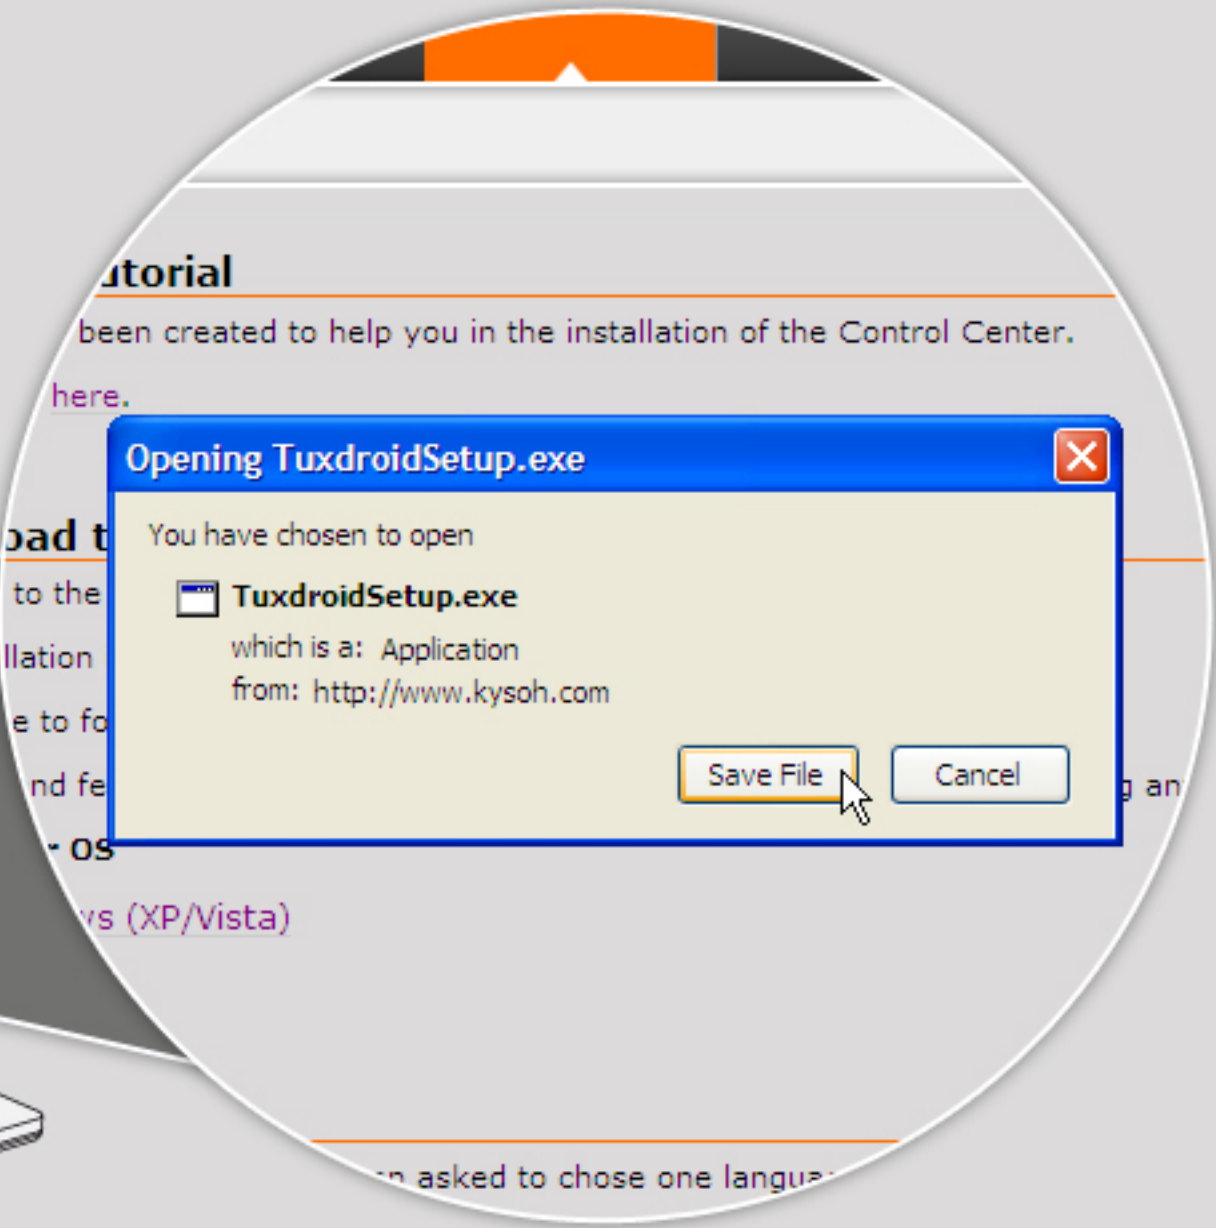

During the installation, you've been asked to chose a language.
It was automatically with the Control Center.

... would like to have access to more languages.

Select your operating system.

3

Download TuxdroidSetup.

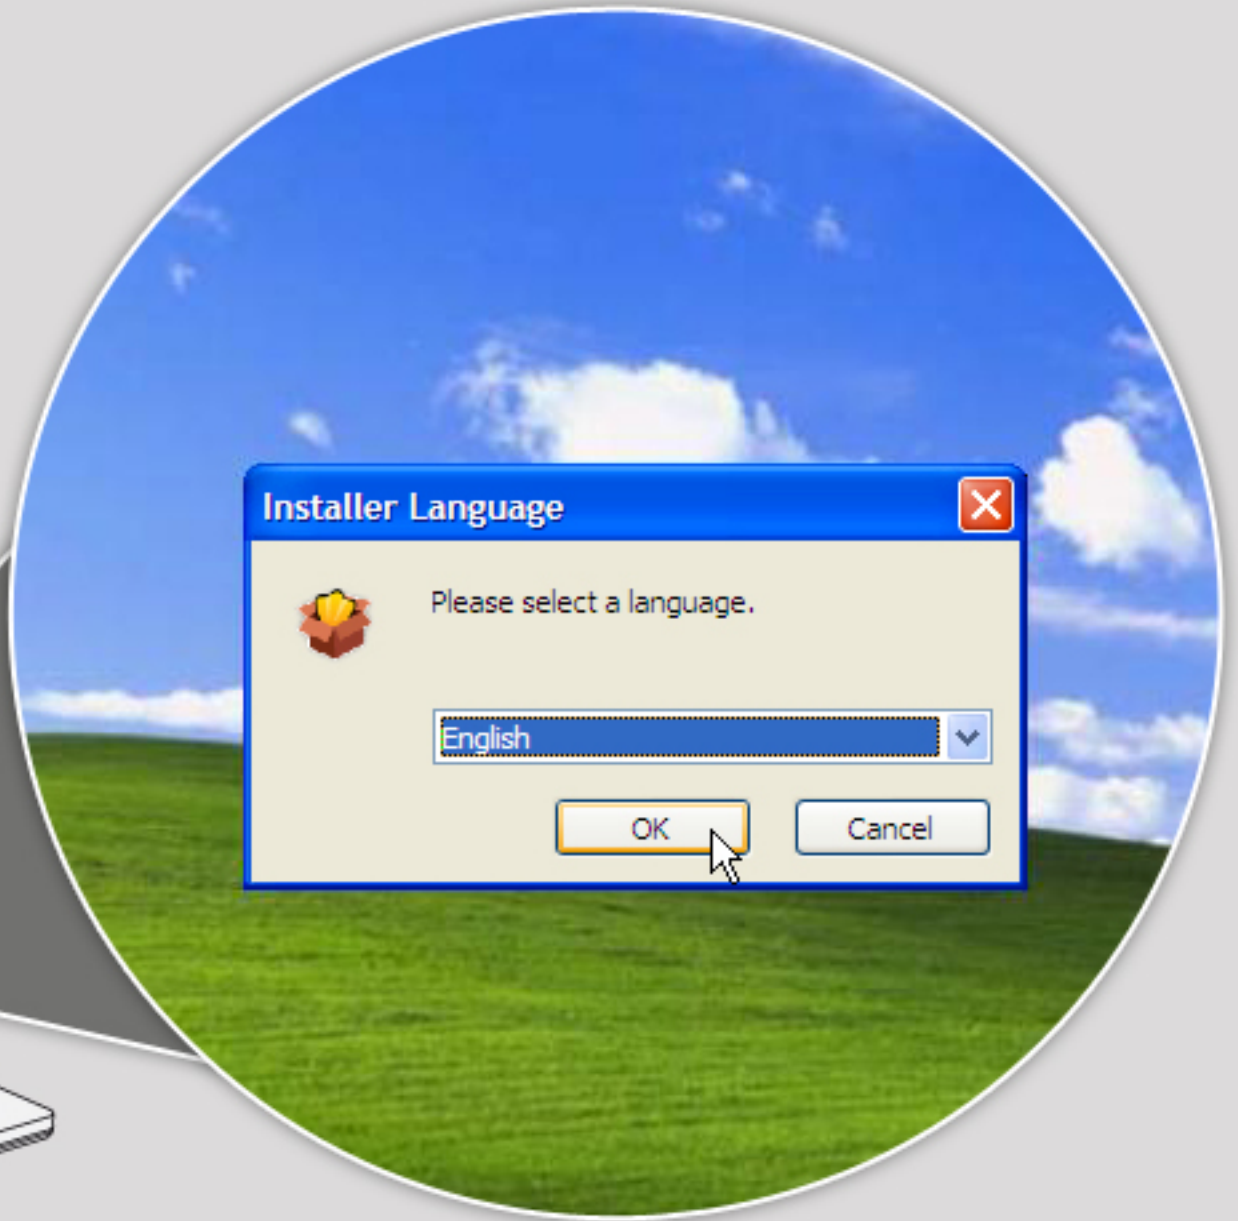

4

Install Tux Control Center by double-clicking on TuxdroidSetup.

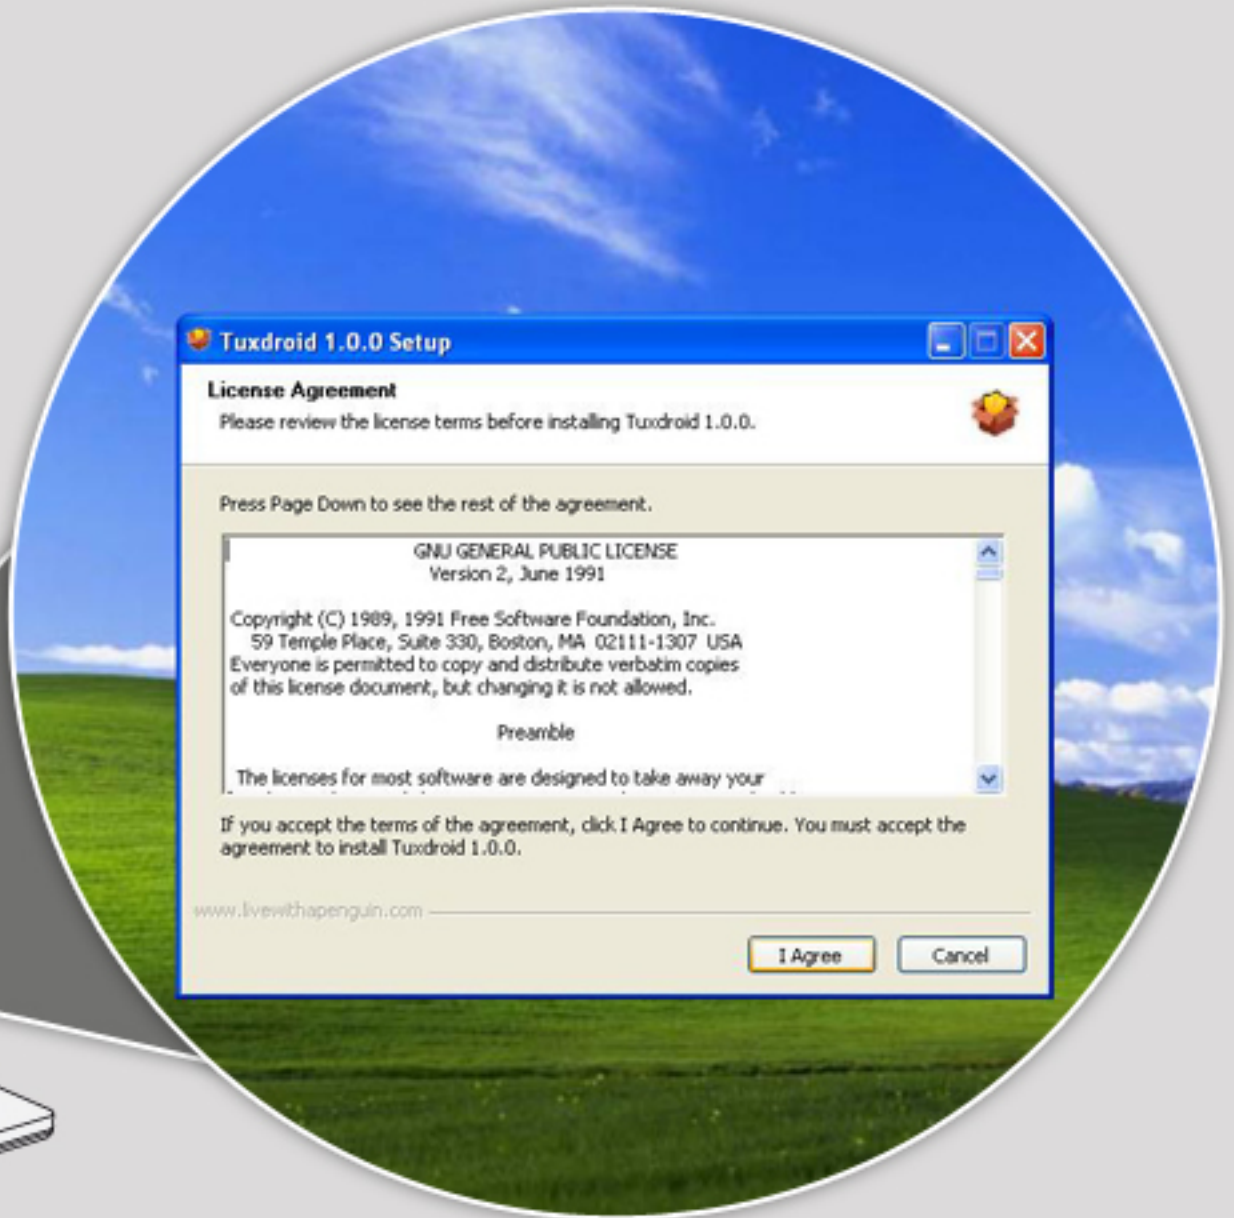

5

Choose your language.

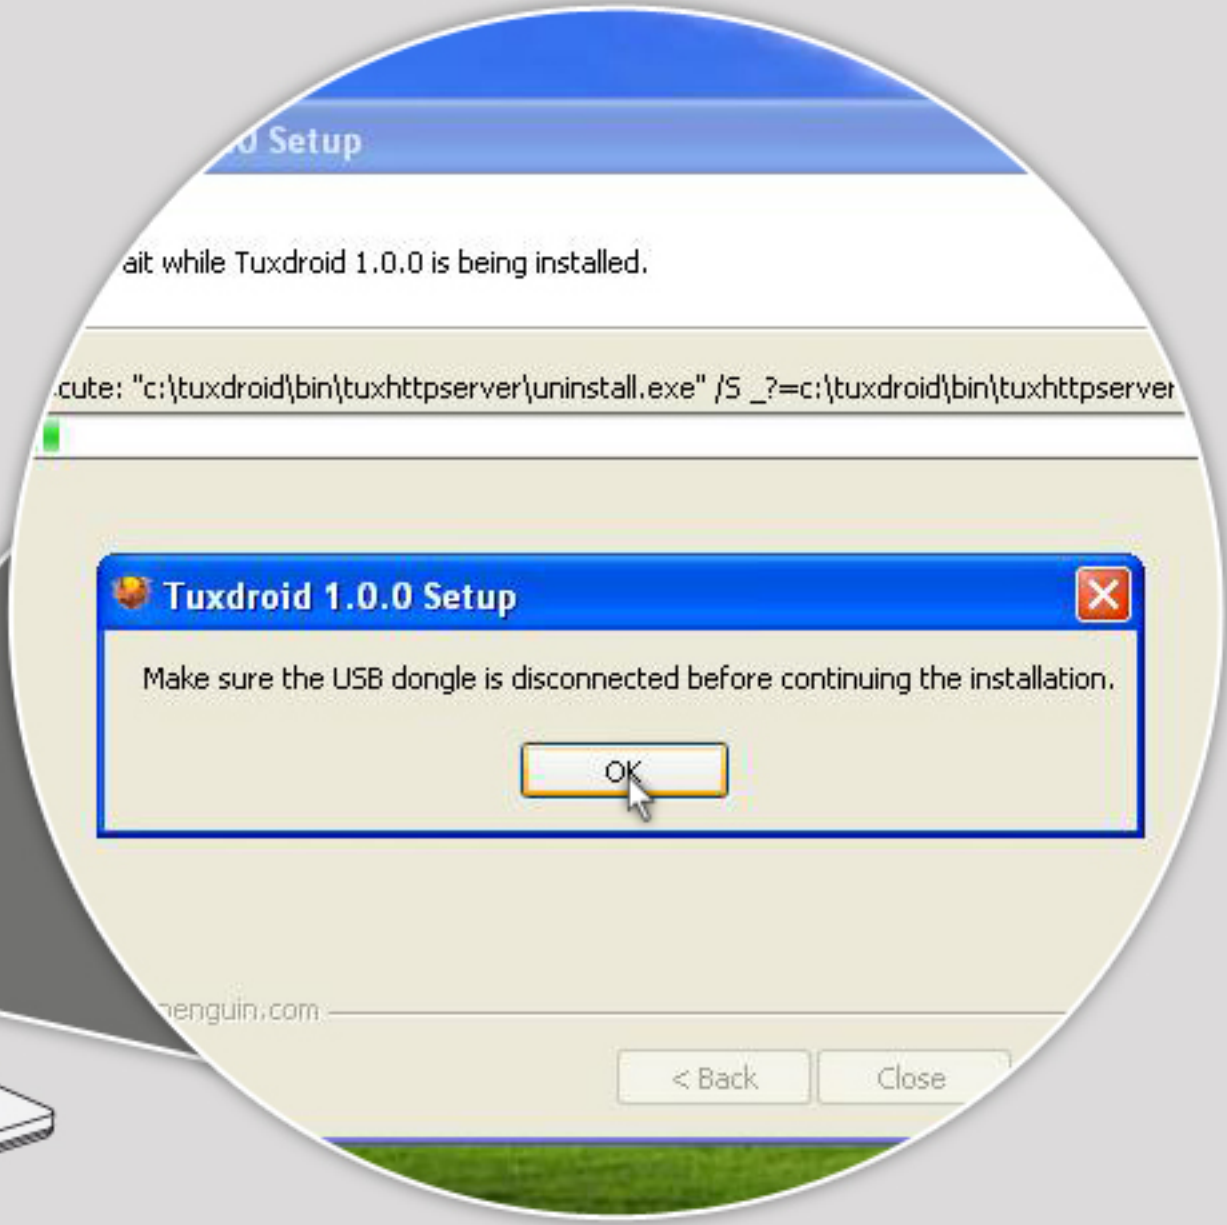

6

Read and agree with the license agreement.

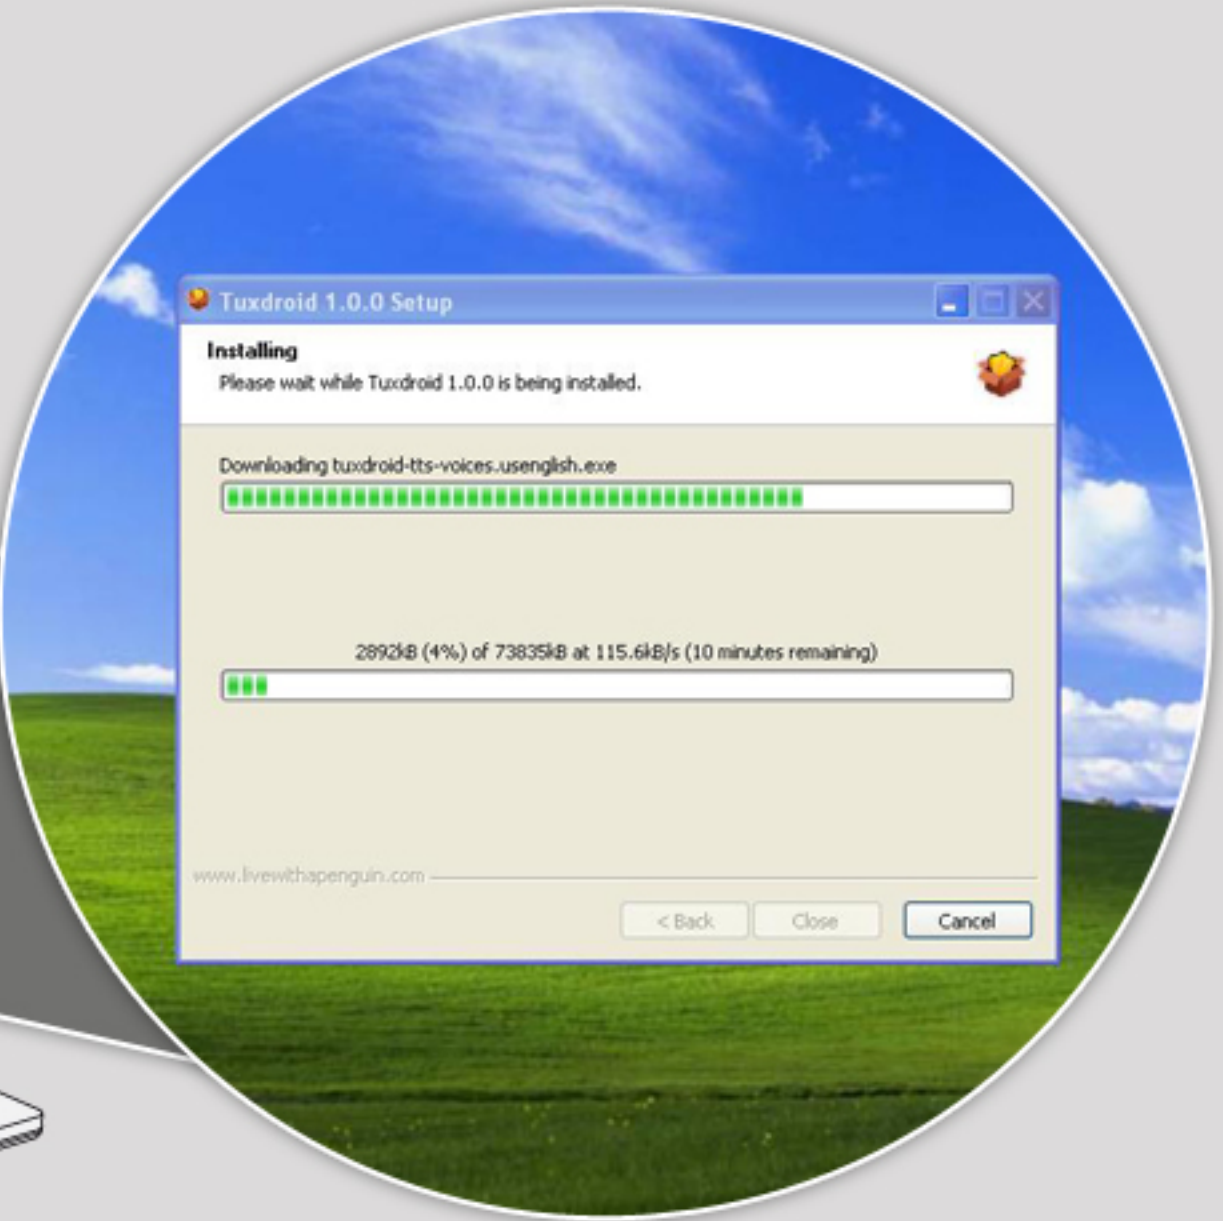

Make sure your USB fish dongle is not connected.

8

Please wait while the software is being installed. This will also setup the Text-To-Speech software in the language you selected, allowing you to access the full capabilities of your Tux. This might take several minutes, depending on the speed of your internet connection.

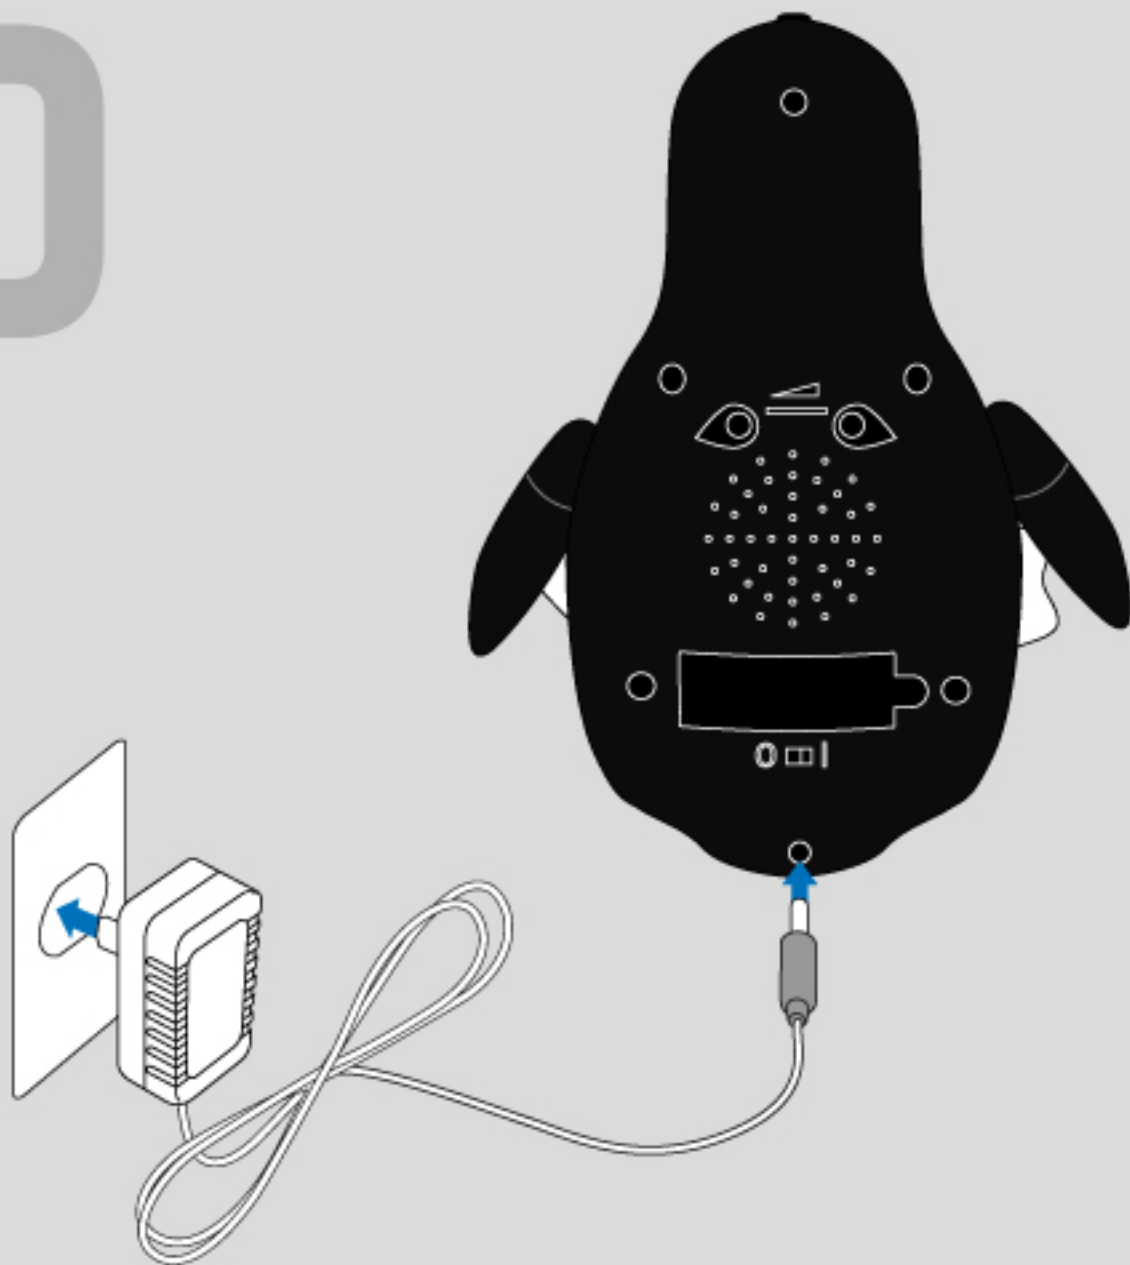

9

Once the software installation is completed, plug in the USB fish dongle with the provided USB cable. The eyes of the fish dongle will start to blink.

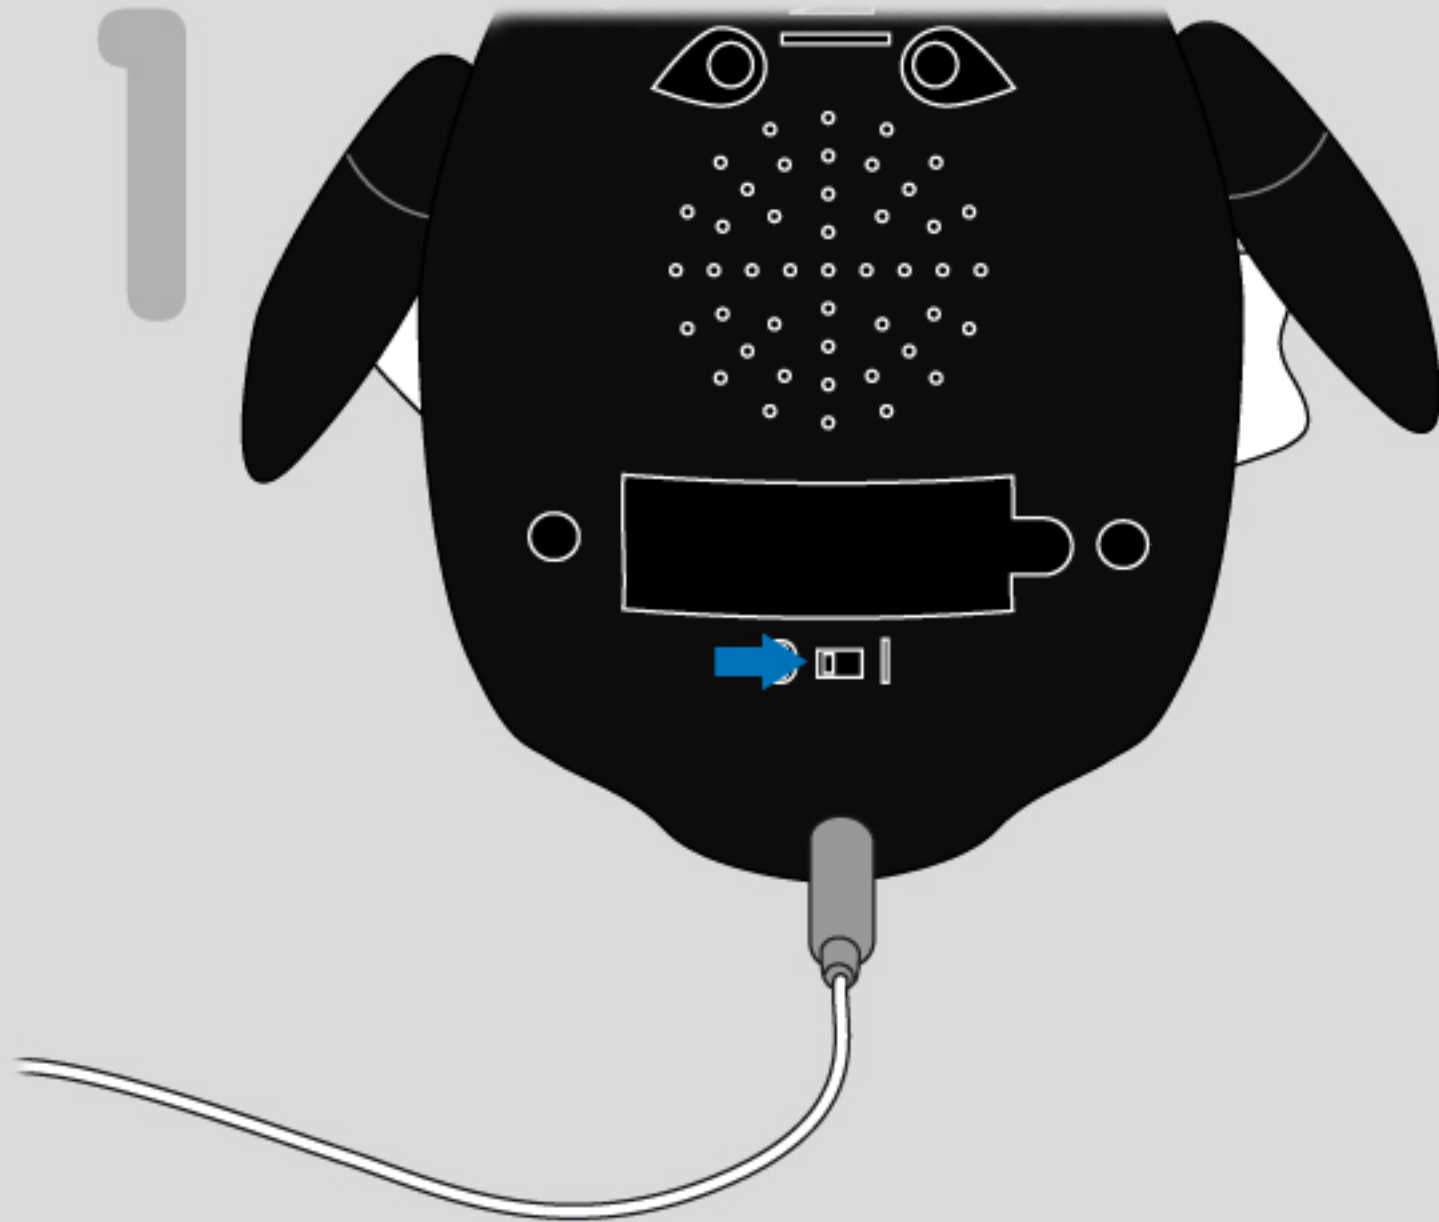

10

When using Tux for the first time, plug in the provided recharger and connect the power cable with Tux as shown in the picture.

Switch on Tux Droid

1 2

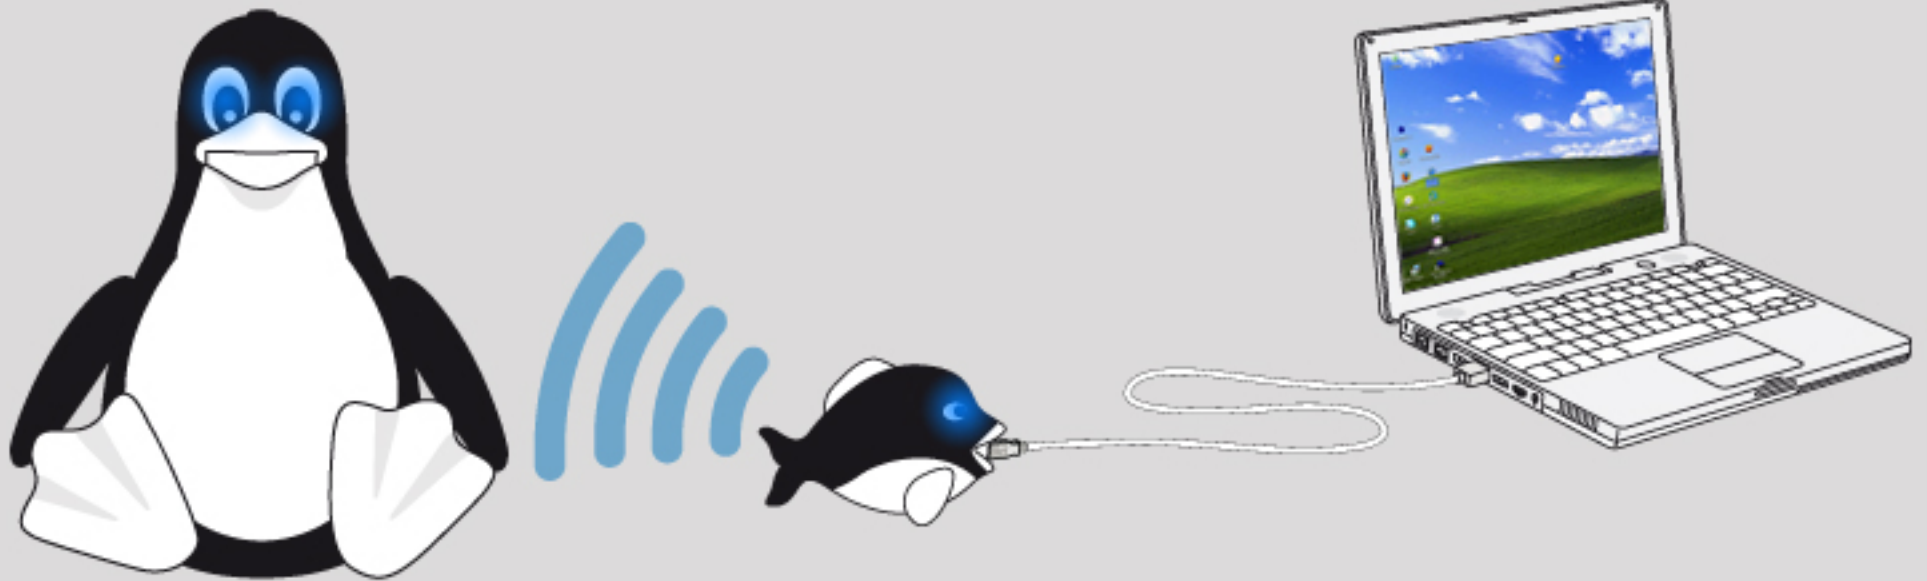

hello

Tux will say "Hello" and his eyes will turn blue

13

Both the lights in the fish dongle and Tux will be lit, indicating Tux is now connected to your computer.

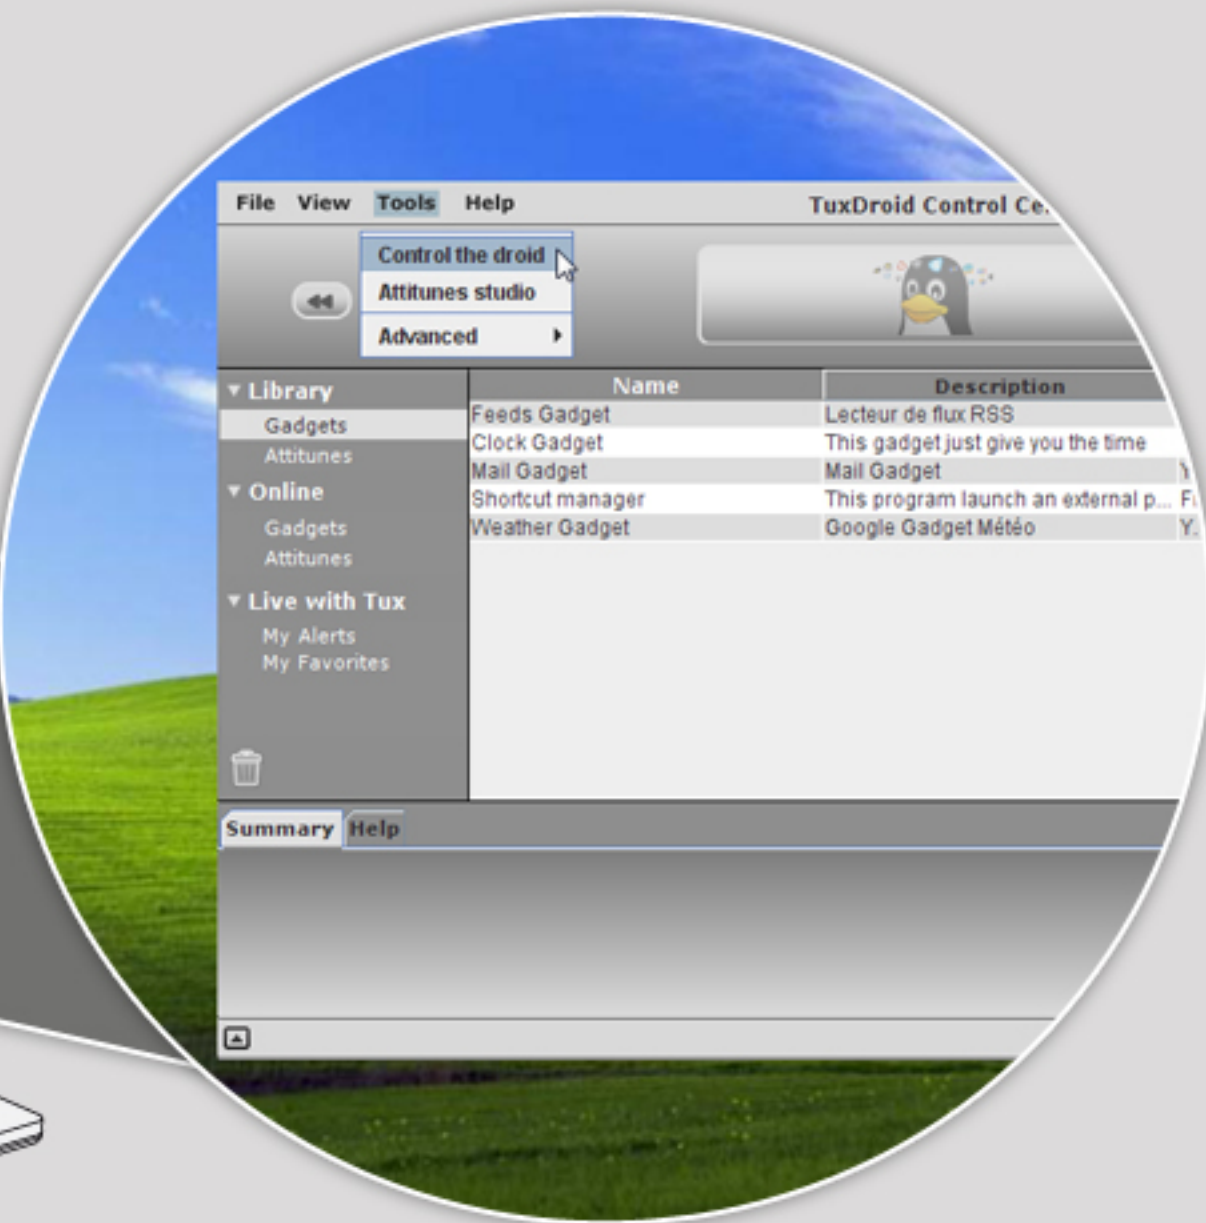

14

Look for Tuxdroid in the Start Menu items and select ControlCenter.

15

The Control Center window will pop up. To test your installation, select Tools from the menu and click on Tux Controller.

16

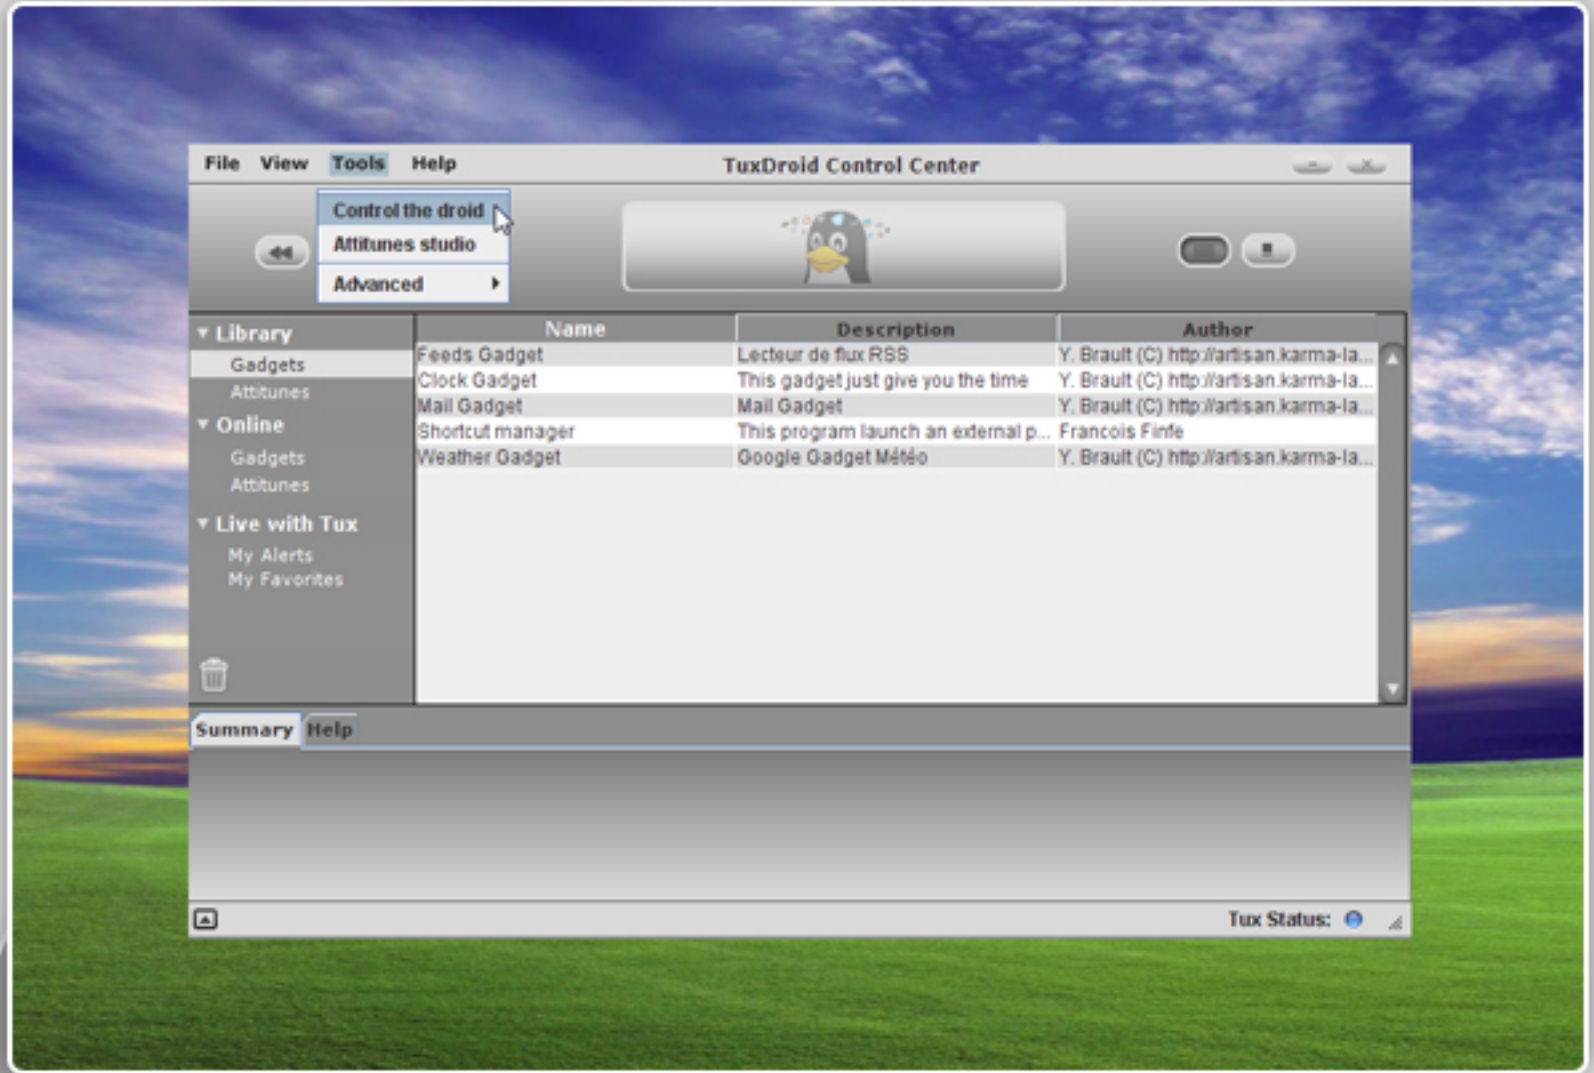

Click the arrow buttons in the Tux Controller window to check out your Tux!

1

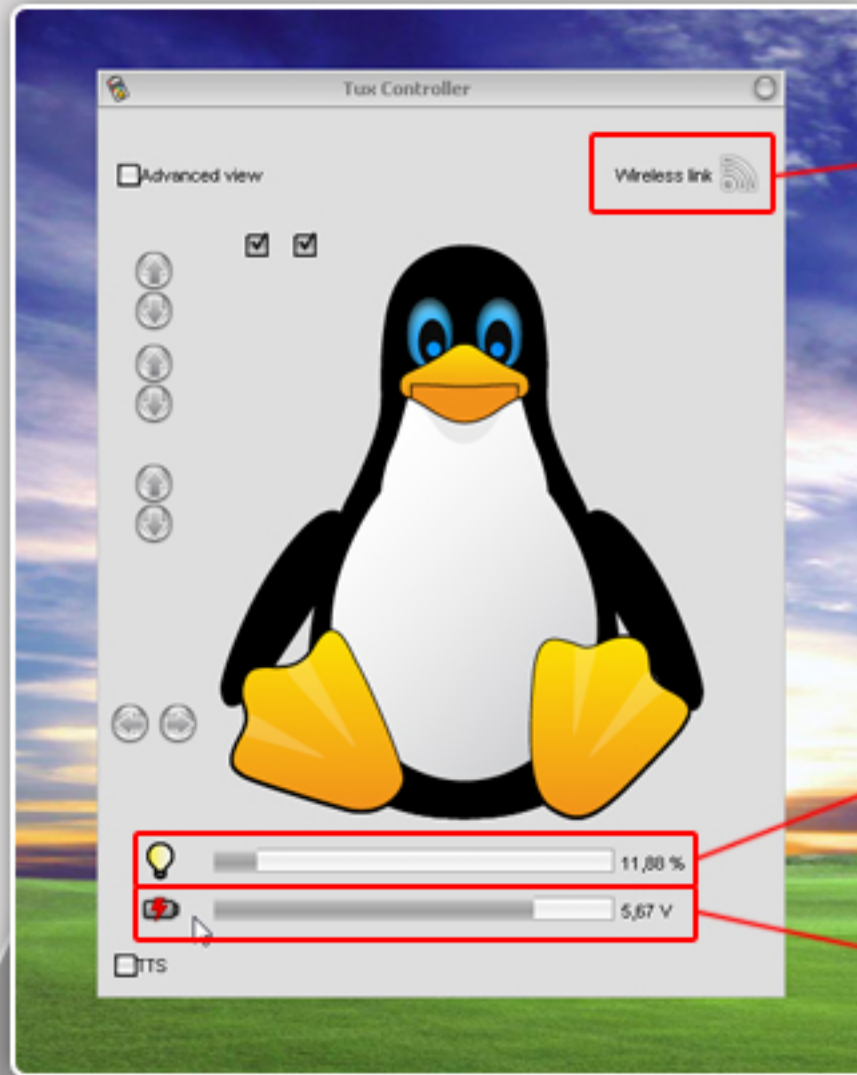

Tux is a wireless robot.

You can control your Tux entirely from your computer.

To do that, go to tools > control the droid.

2

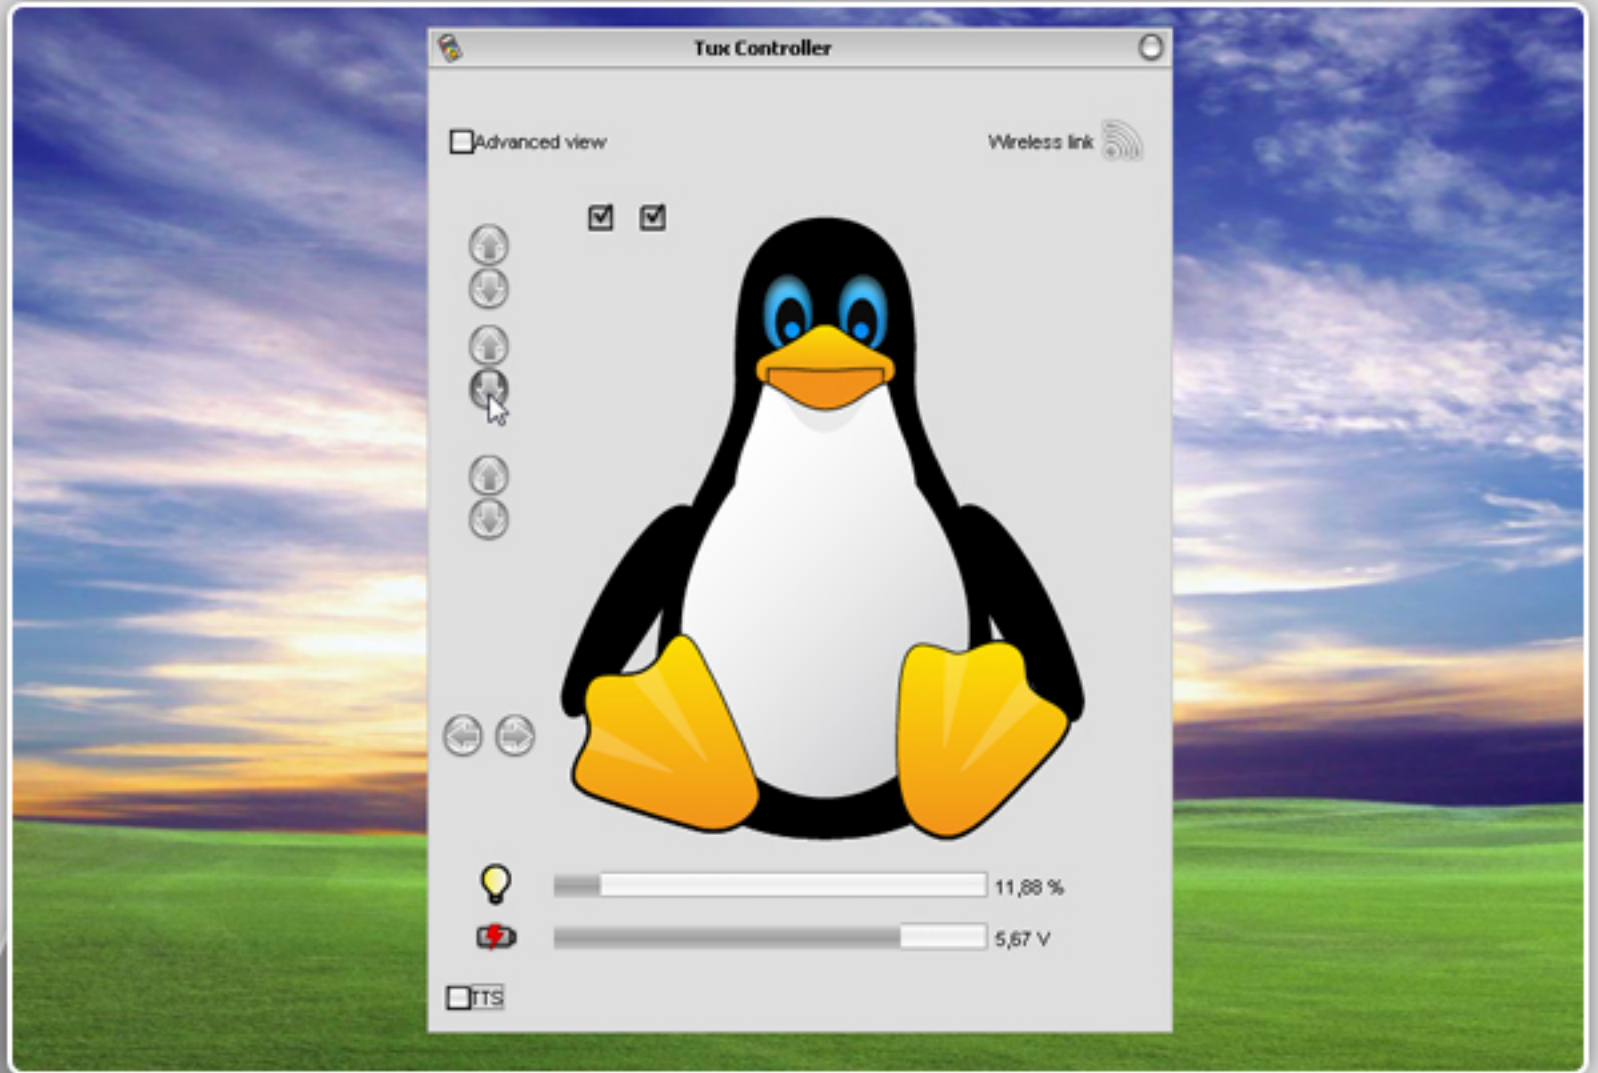

First check

1. Is your Tux connected with the dongle?
Check the icon.
2. Tux is also equipped with a light sensor
Try to cover the eyes of Tux and check the
light level.
3. You can also check the battery level.
The battery level function will only display
the battery information correctly when
removing the power adaptor.

3

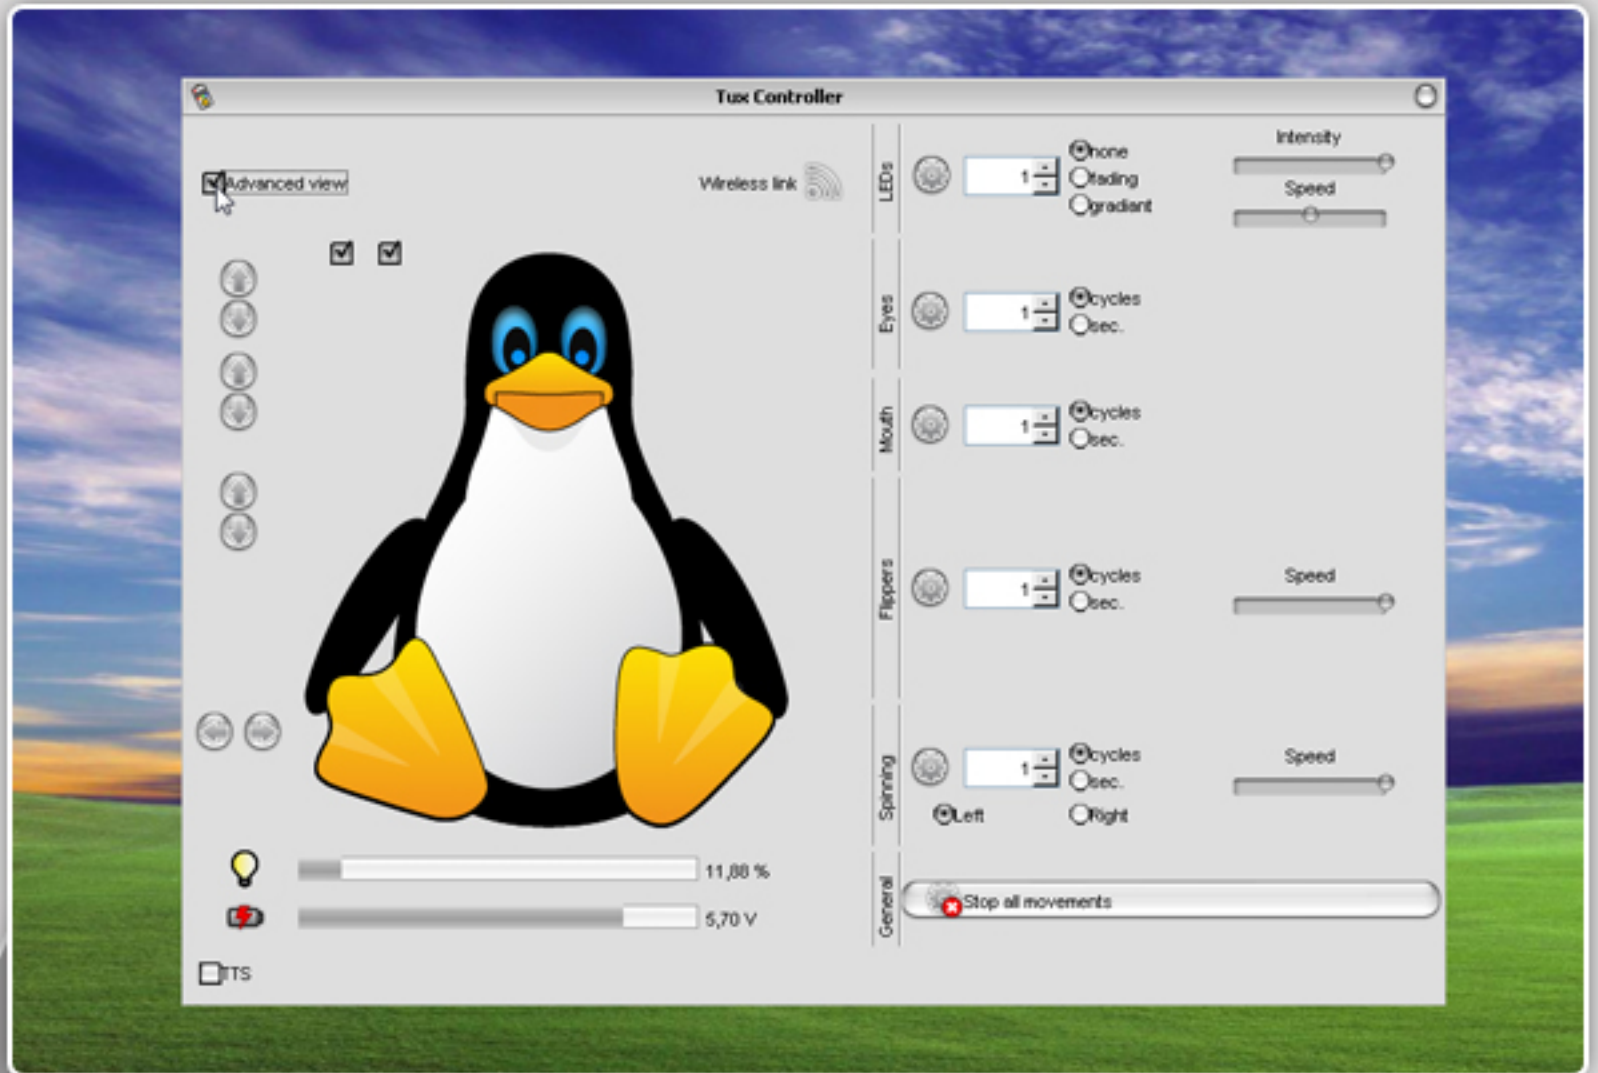

Now let's check out all the movements your Tux can do:

Just click the arrow buttons next to the Tux body part you want to move.

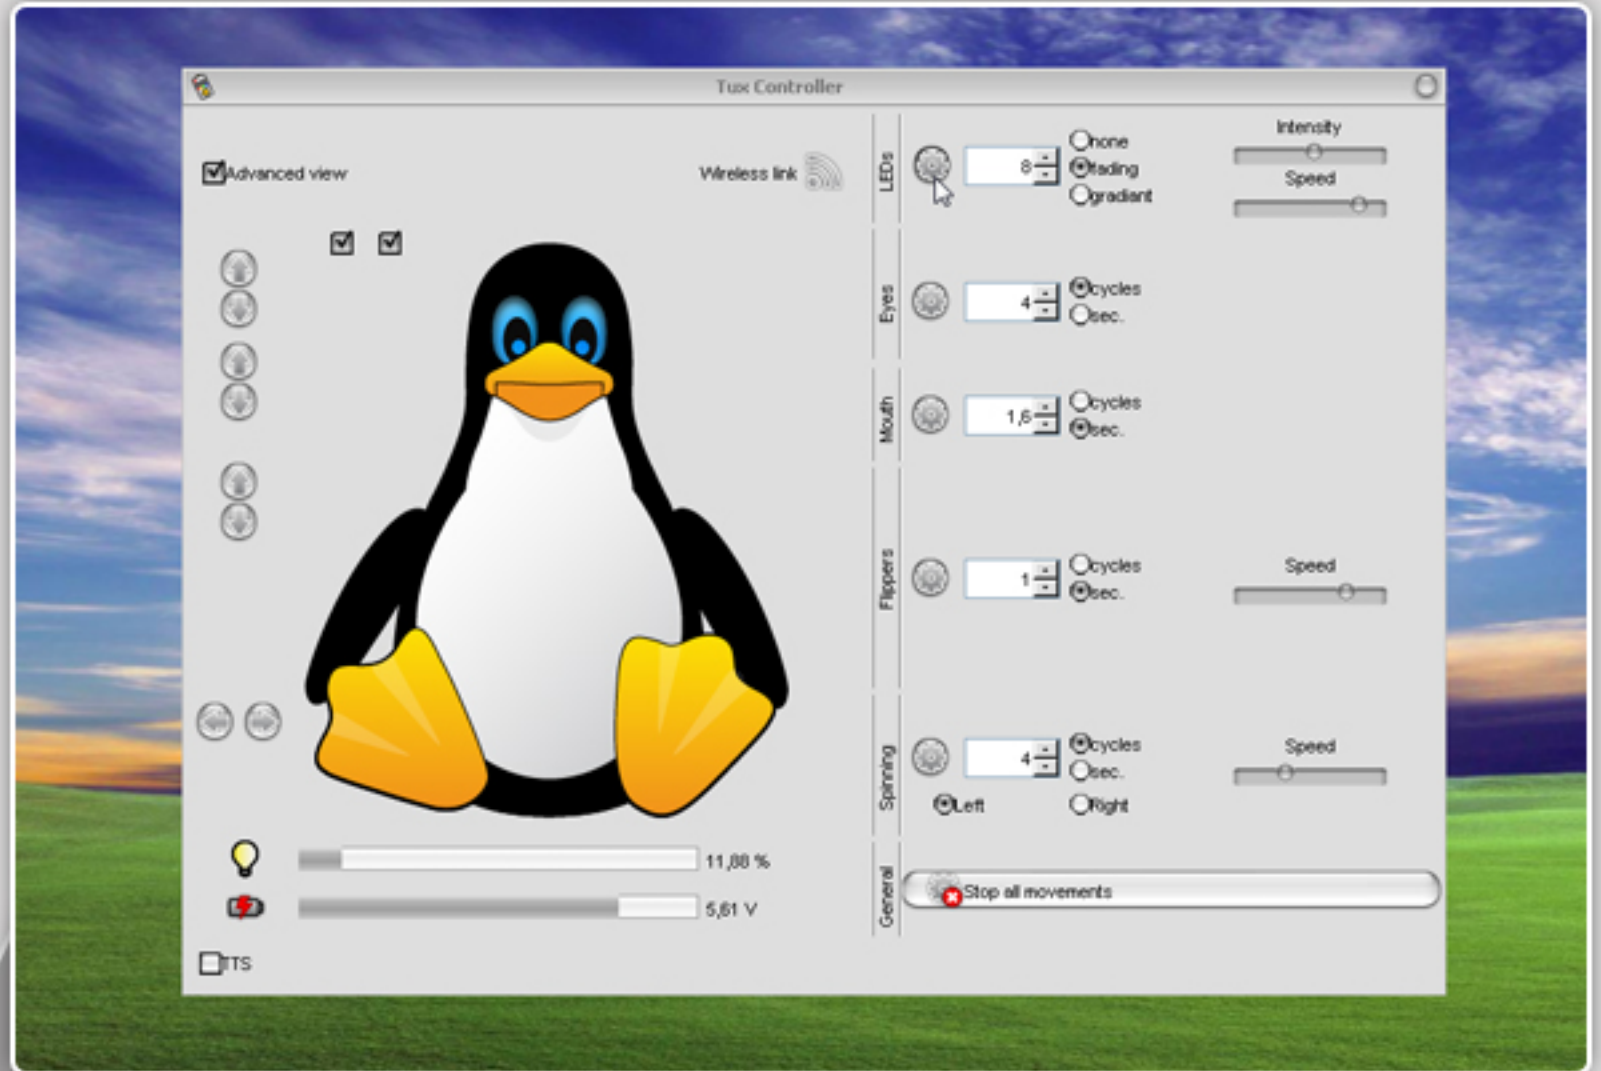

4

Click the Advanced View checkbox to access more advanced movement functions.

5

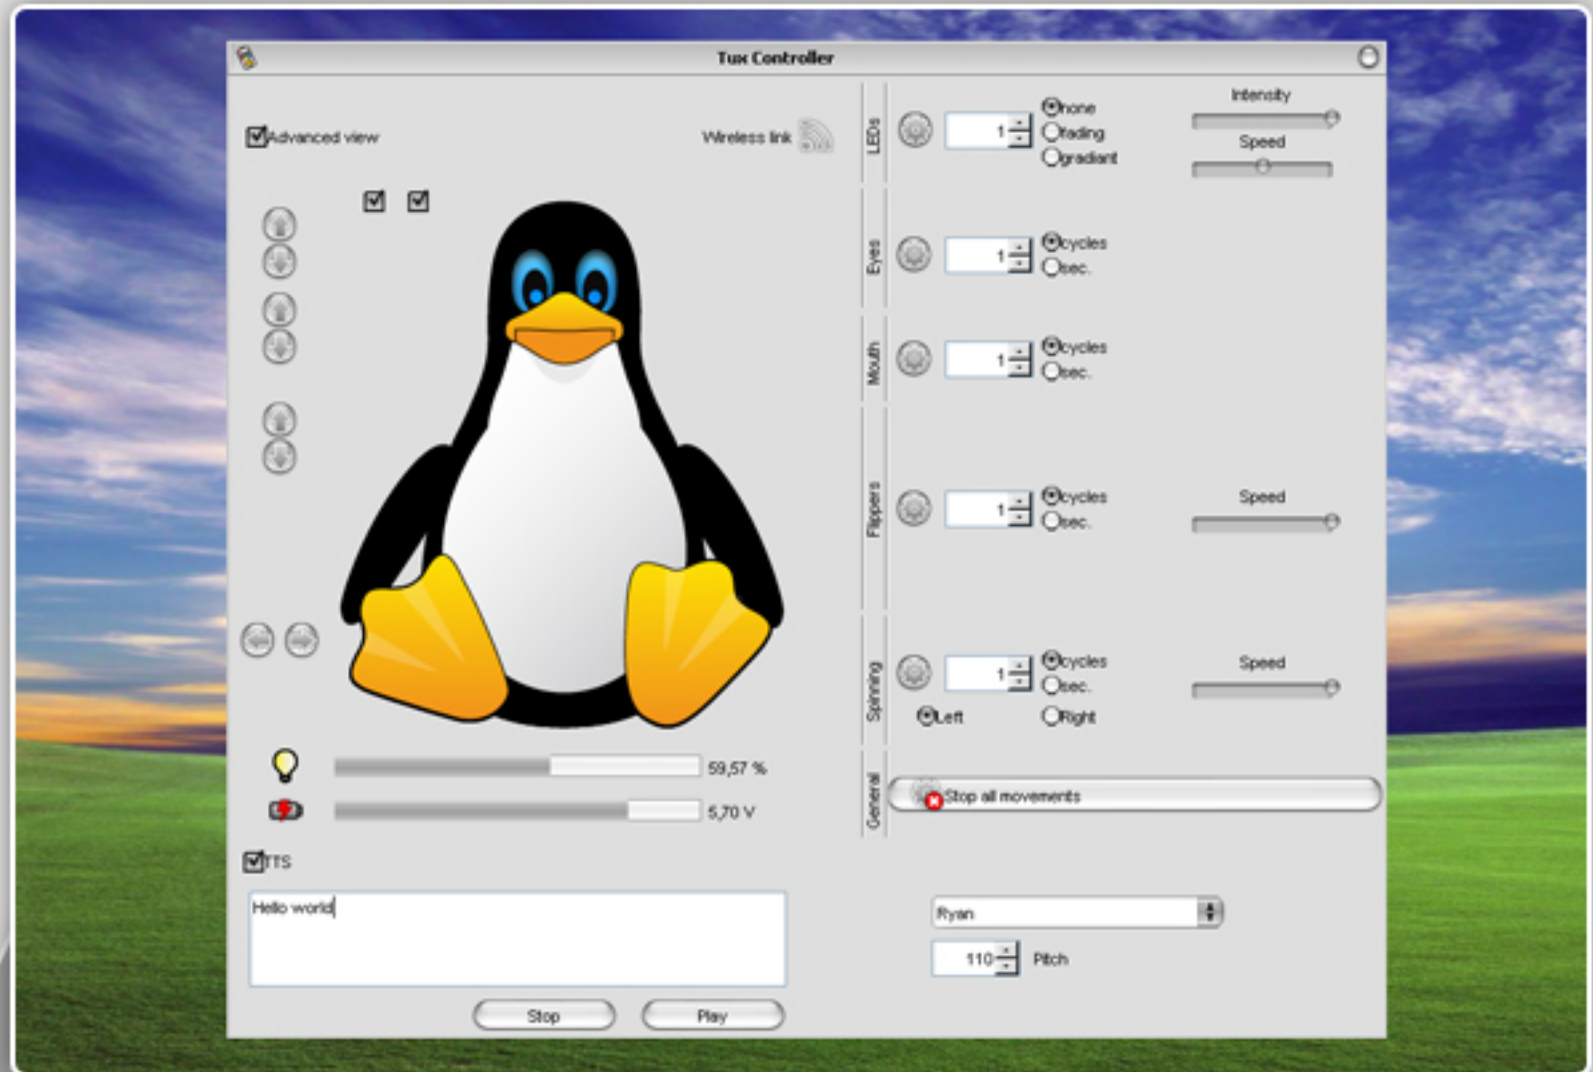

Combine movements:

Change the values and sliders and click the  button to see what it does. You can click several gear icons at the same time.

Please note: the eyes and beak movements cannot be actuated at the same time as they are sharing the same motor.

6

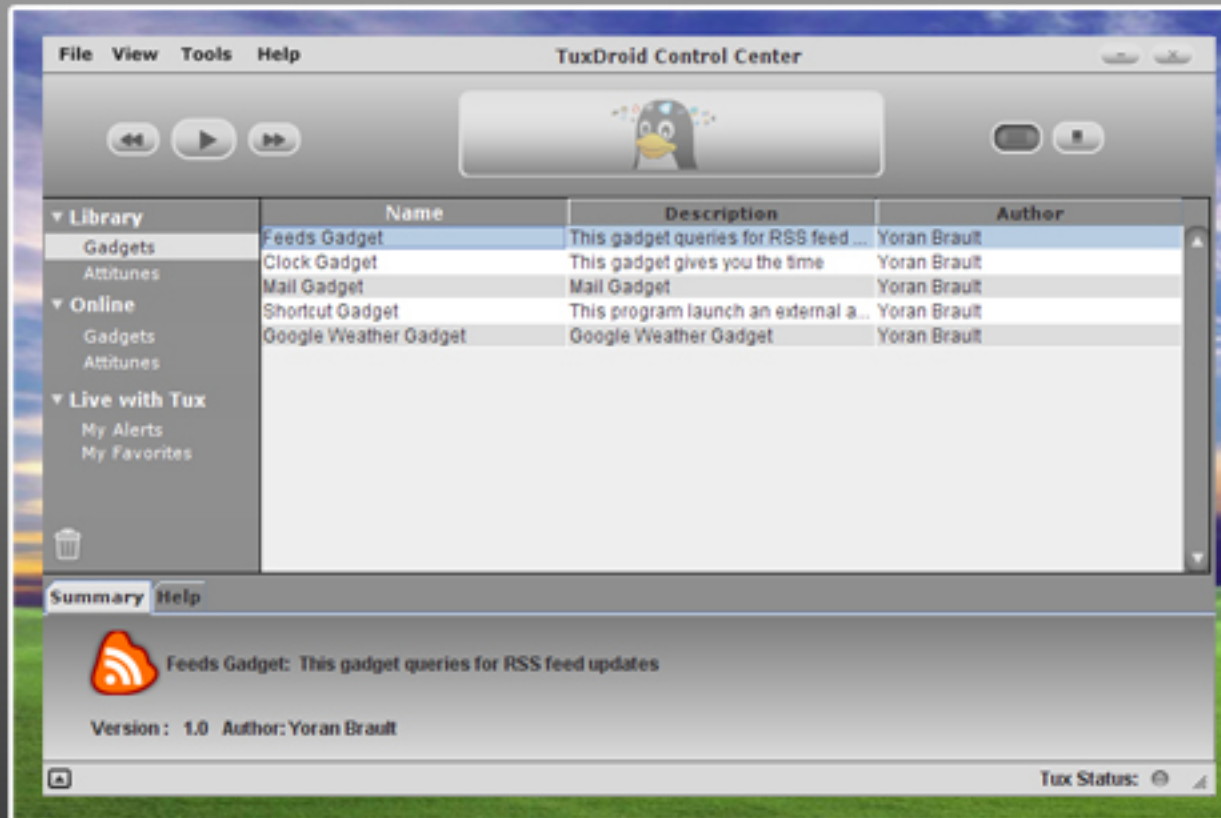

Click the TTS checkbox to access the Speech functions.

Type a sentence replacing Hello world. At the right you can select the voice of your choice and tweak the pitch level. Just try it out and have fun!

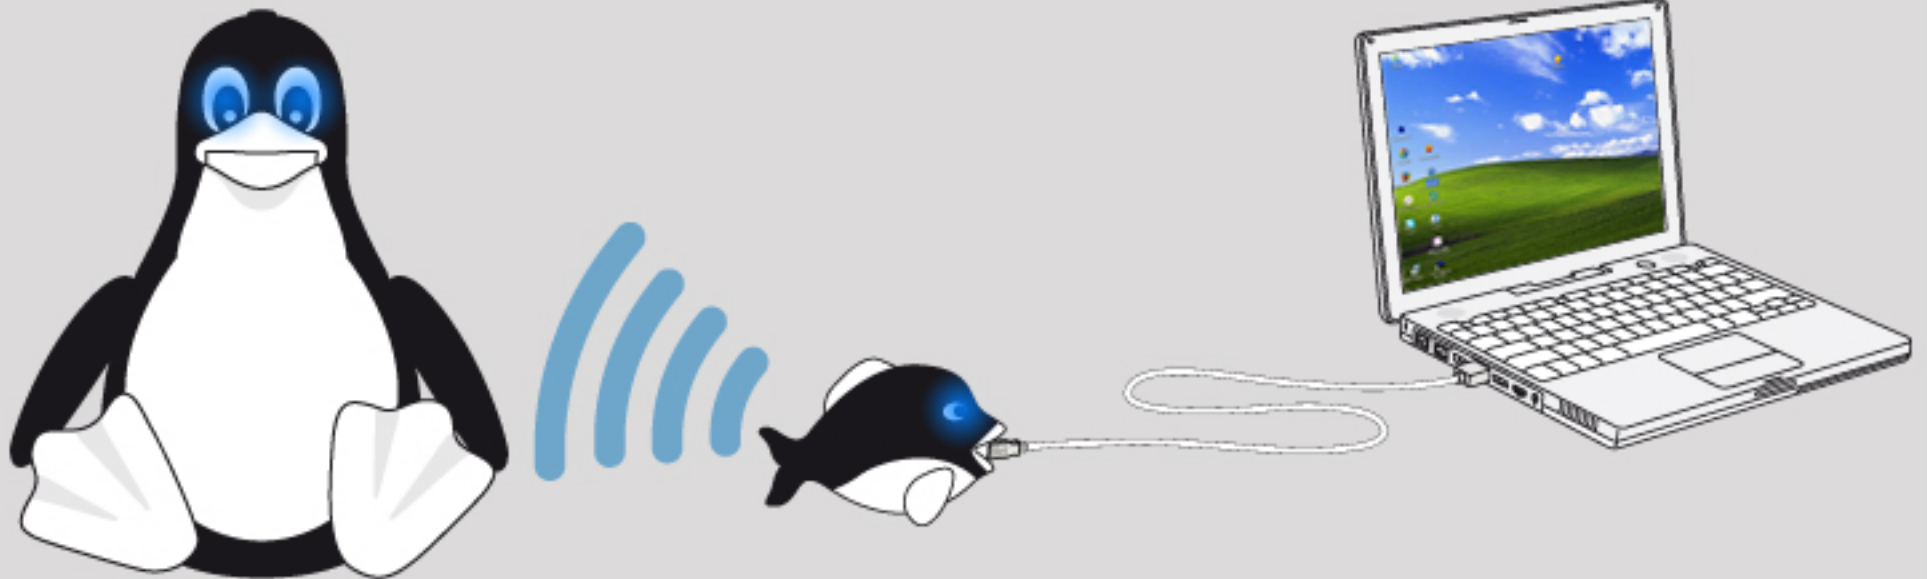

Kysoh

control center guide

1

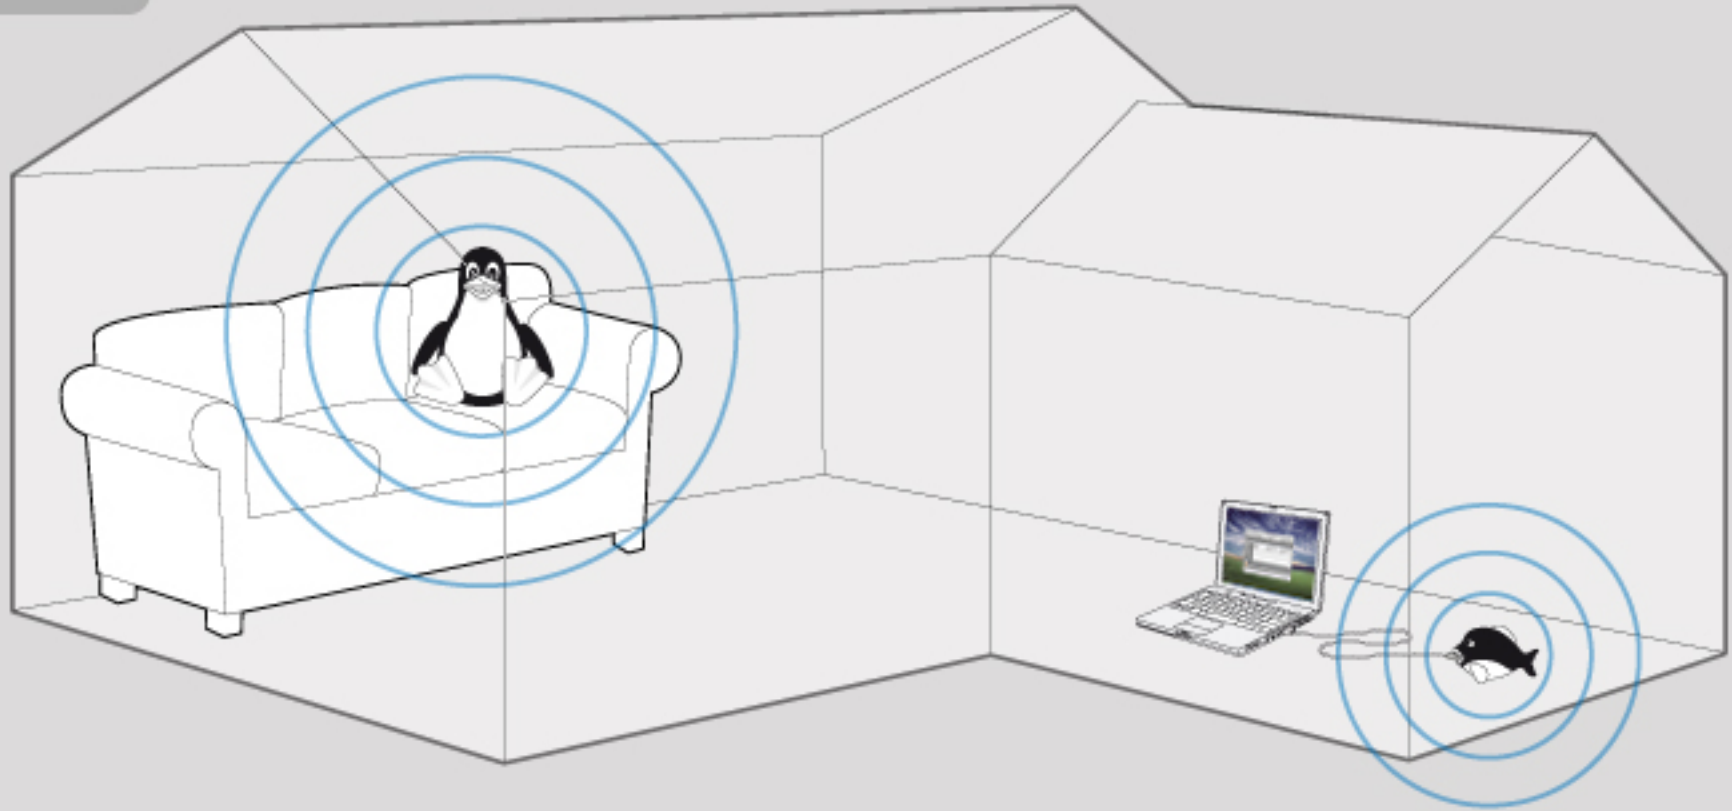

Introducing the basics

What is a smart companion?

A smart companion is a consumer device whose main function is to easily access internet and computer services. A smart companion is a new way to access your digital world without having to sit behind your computer.

2

Who is Tux Droid?

Tux Droid is the first smart companion connected wirelessly to your PC. The long hours spent behind your screen are over! Tux Droid will provide you with your digital information from anywhere in your house!

3

"YOU HAVE NO NEW EMAIL!"

"I'm singing in the rain
just singing in the rain
..."

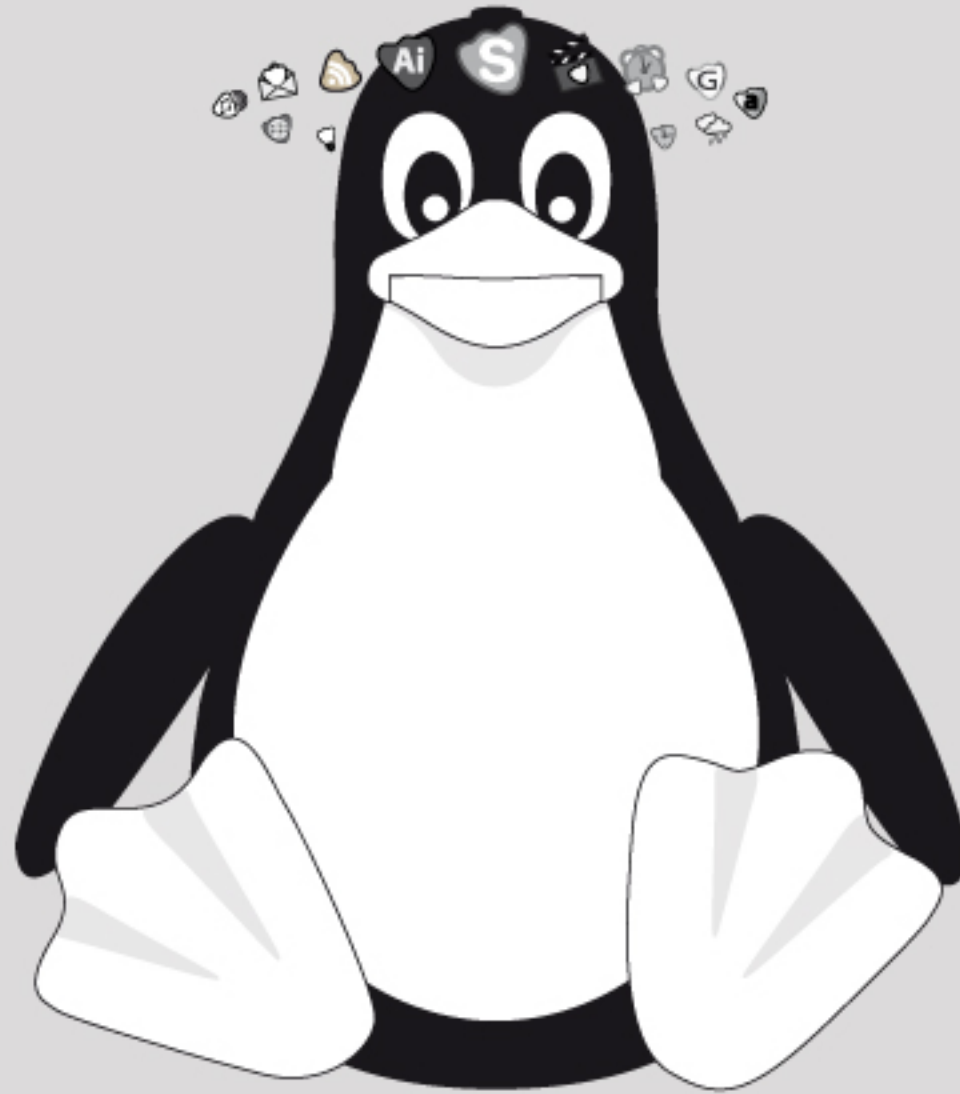

What does he do?

Just as a human being, Tux Droid has skills (gadgets) and emotions (attitudes).

Make your Tux Droid sing 'Singing in the rain' when giving the weather forecast or make him cry when you didn't receive any new E-mail.

4

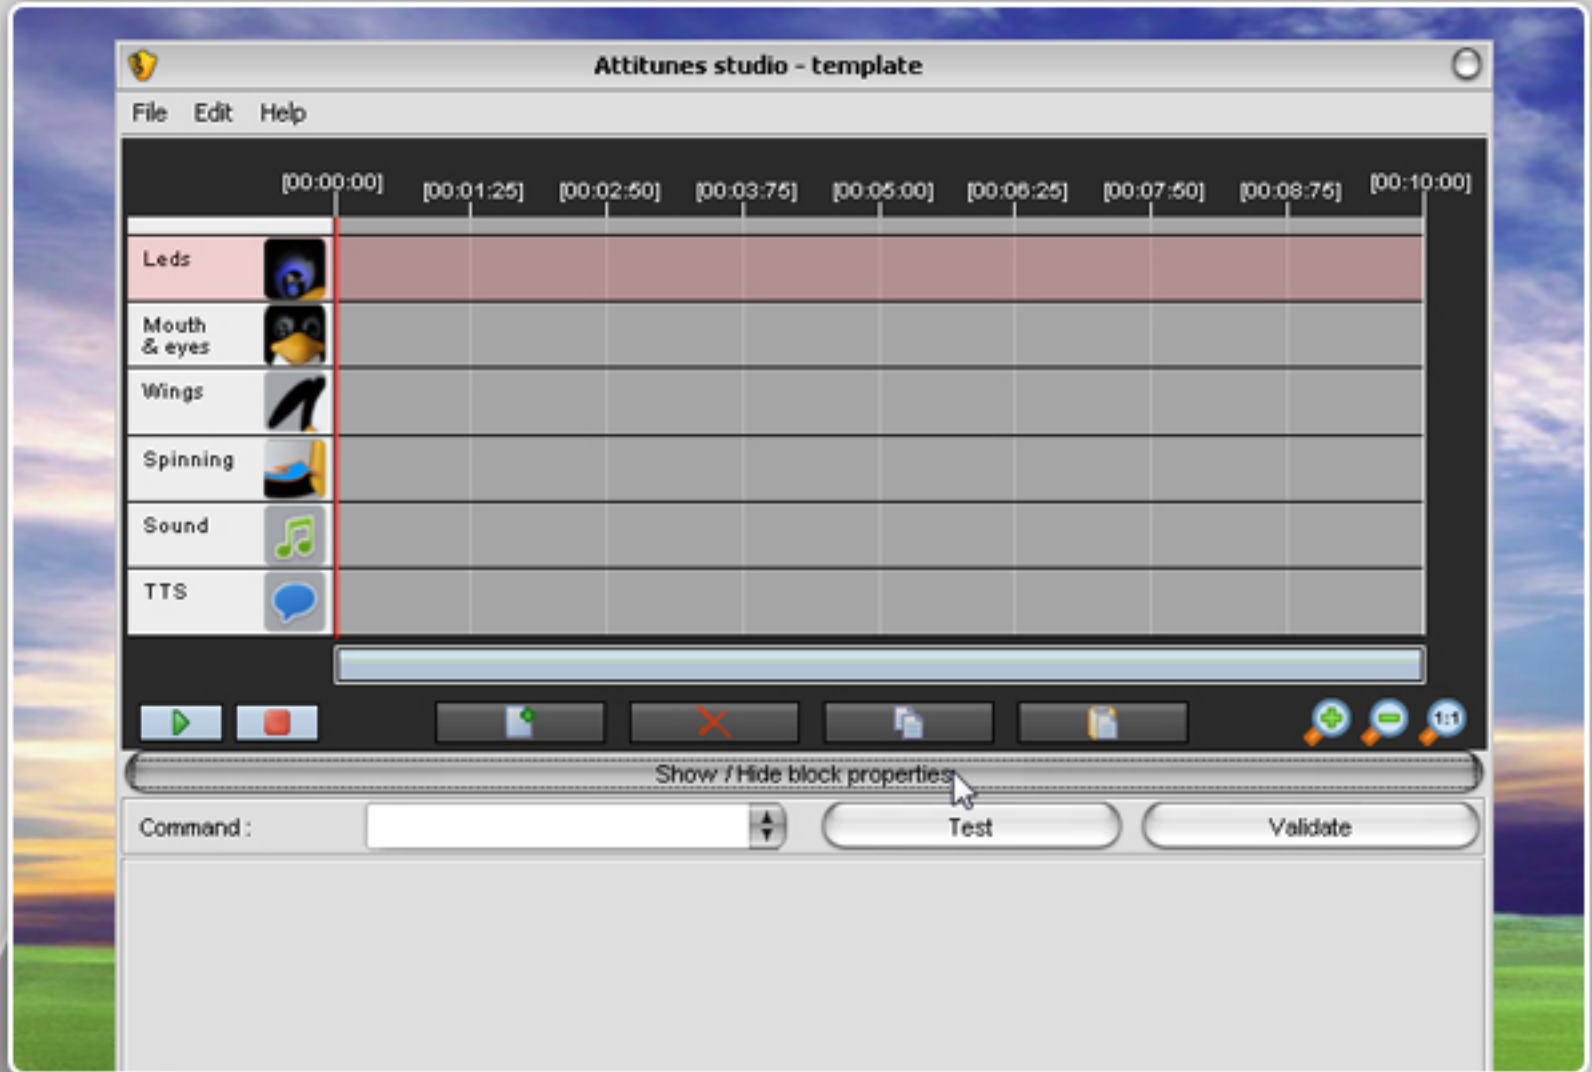

What are gadgets?

Similarly like the Google or Vista gadgets, Tux Droid gadgets are mini-applications residing on the computer desktop and deliver a variety of personalized information such as E-mail, weather forecast, news, podcasts, etc.

5

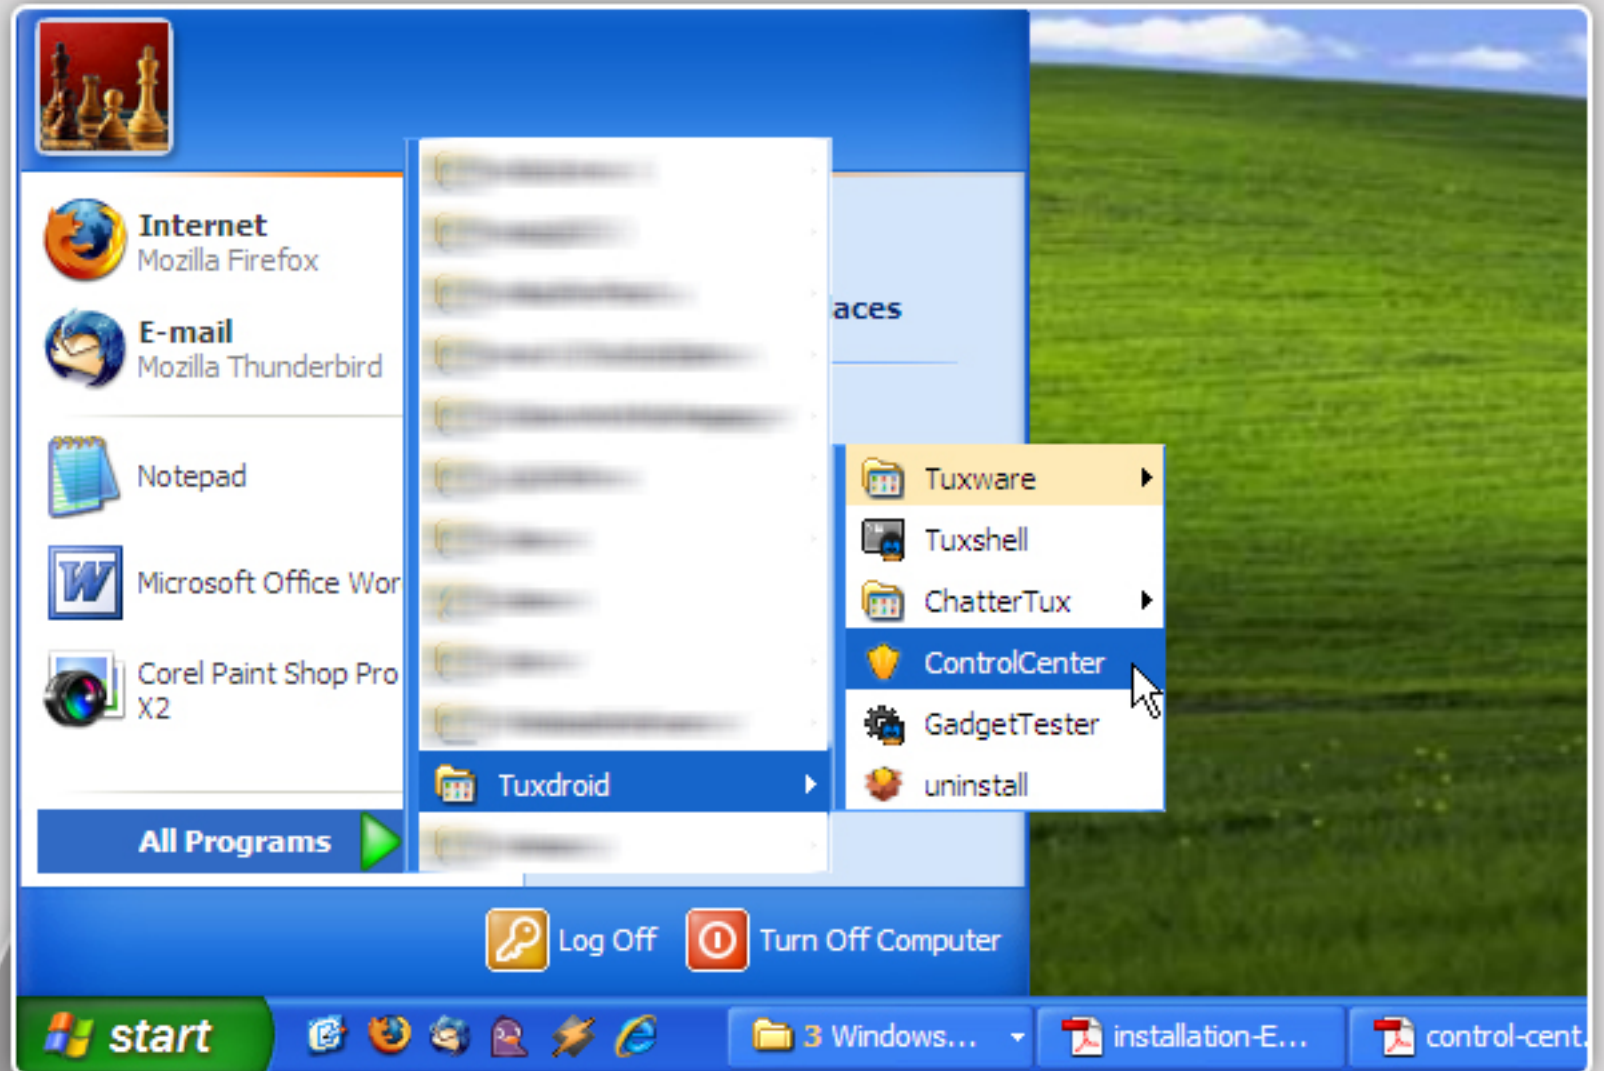

What are attitunes?

Attitunes are robot animations combining movement, sound, Text-To-Speech and fun. You will find a complete tutorial on how to create your own attitunes in the documentation section of the Kysoh website.

6

Using the Control Center

How does it work?

After completing the software installation, you are ready to launch the Control Center and start the configuration.

First launch the Control Center as shown above.

Library

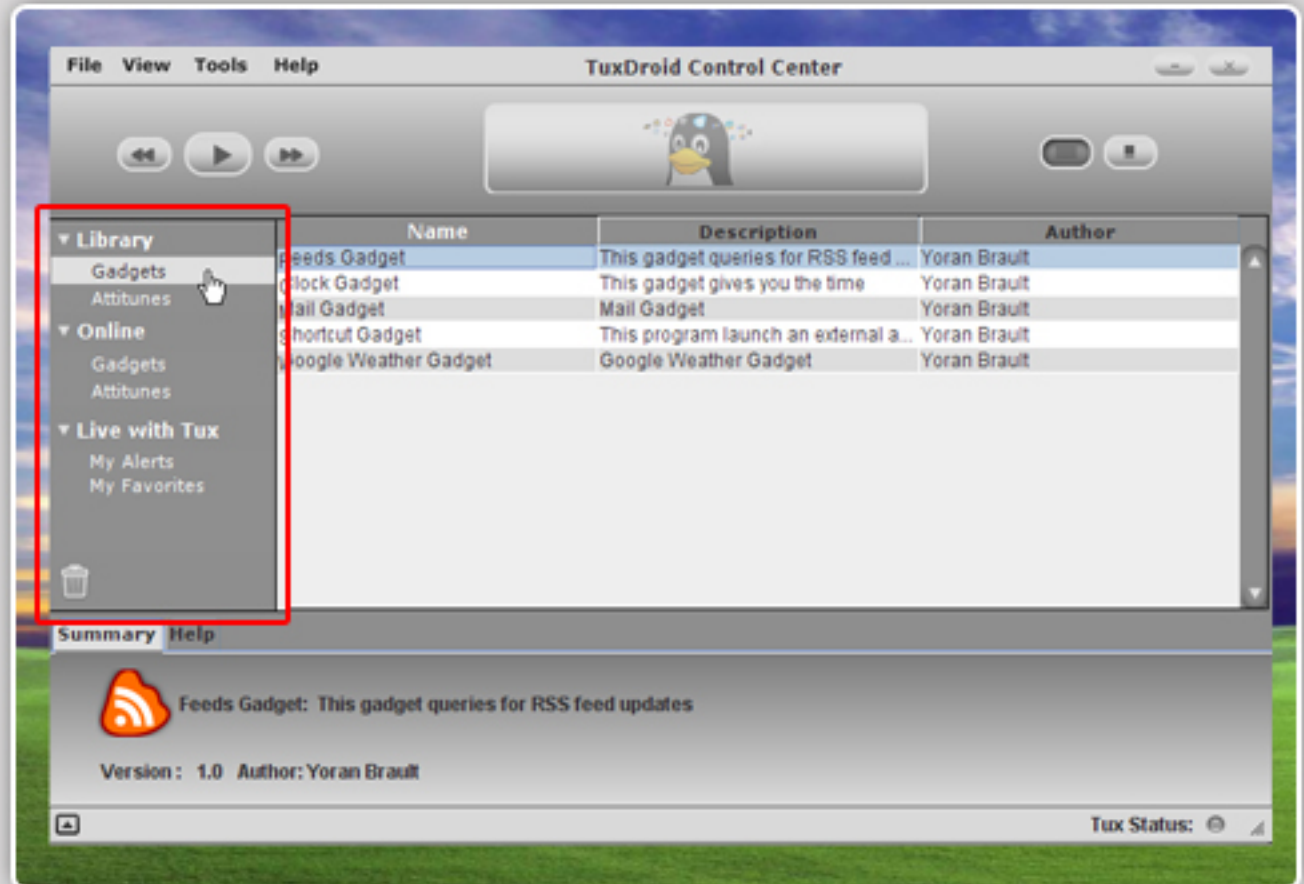

Gadgets and Attitunes stored locally on your computer. These gadgets and attitunes will be used to configure your Tux Droid.

Online

Gadgets and Attitunes available on the community website. You can access them freely and add skills and emotions to your smart companion.

Live with Tux

Organize your Alerts and Favorites. Alerts are scheduled events. Gadgets in the favorites folder can be accessed with the remote control.

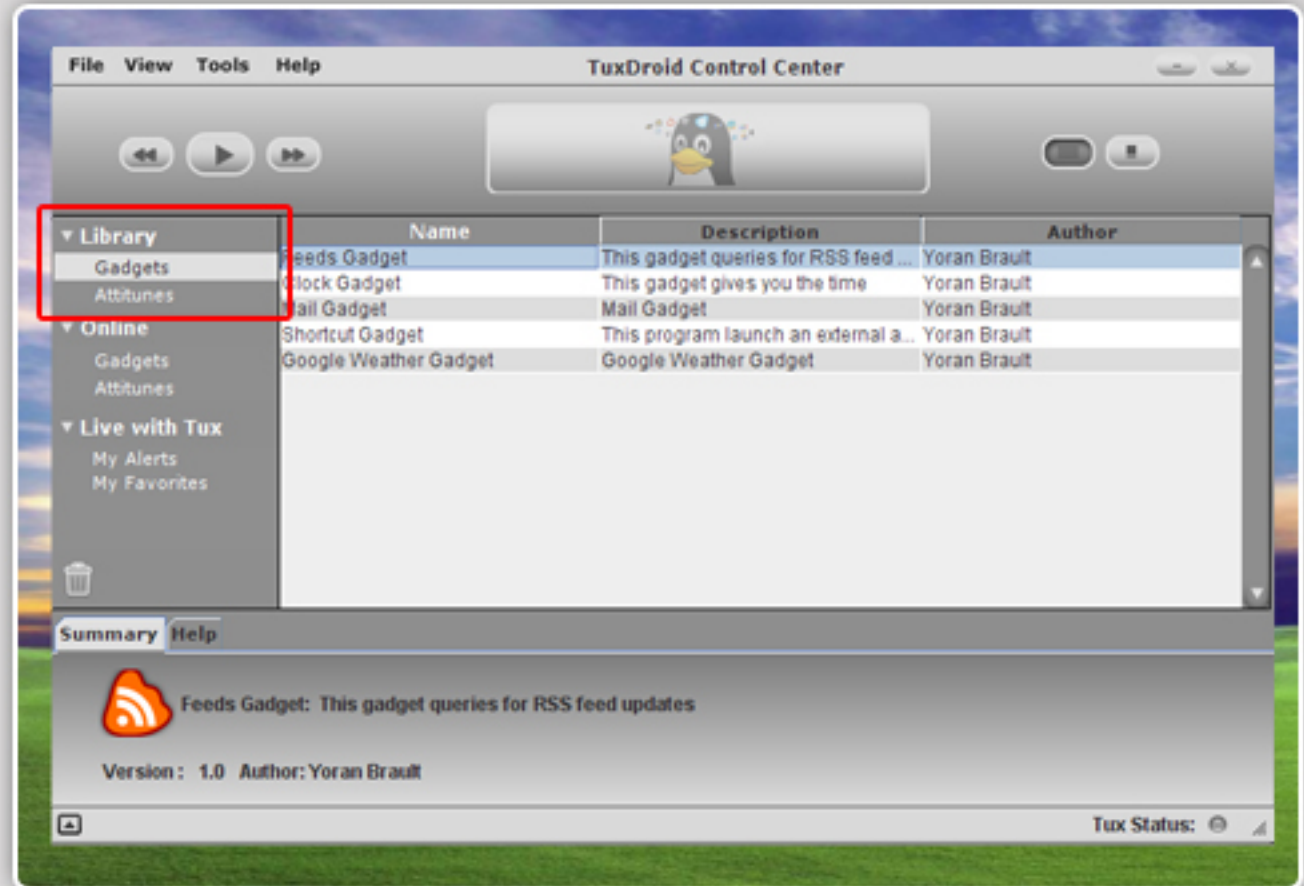

8

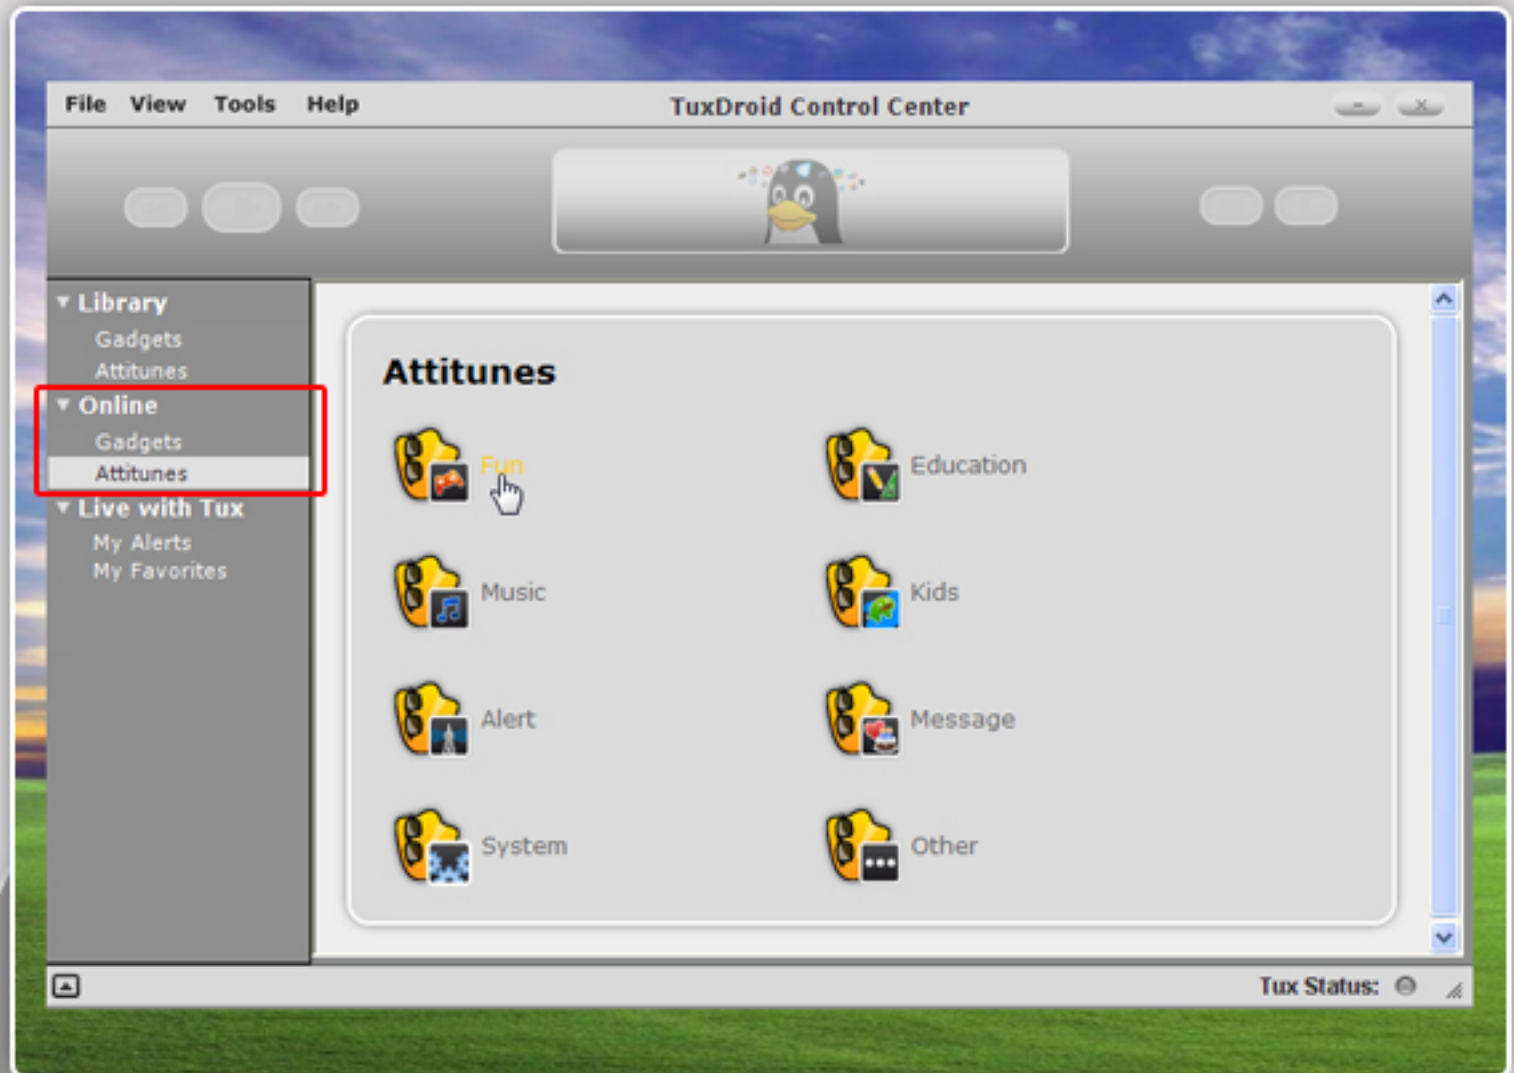

Library

How to use a gadget & Attitunes?

- Select a gadget or attitune from the Library.
- Drag and drop the selected item into "My Alerts" or "Favorites".
My alerts: When putting items here, they will be launched at a specified time.
My favorites: the items listed here will be accessible using the remote control.
- Remove an item by dragging and dropping it into the trash can.

9

Online

This folder displays the gadgets and attitunes located on the Kysoh server. Come back here regularly to discover new free gadgets and attitunes.

10

Live with Tux

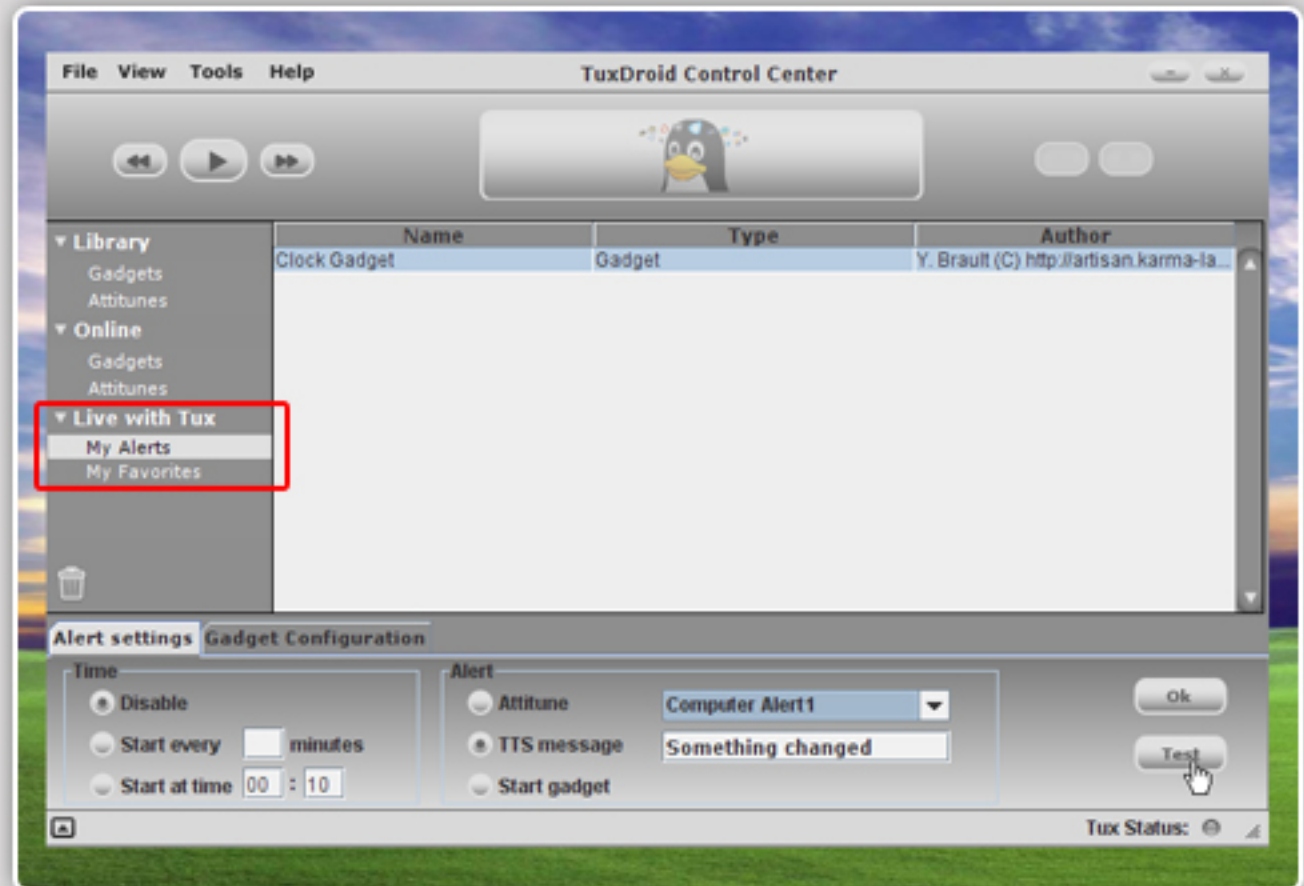

My Alerts

Here you can specify to play gadgets or attitunes every 5 minutes or every week.

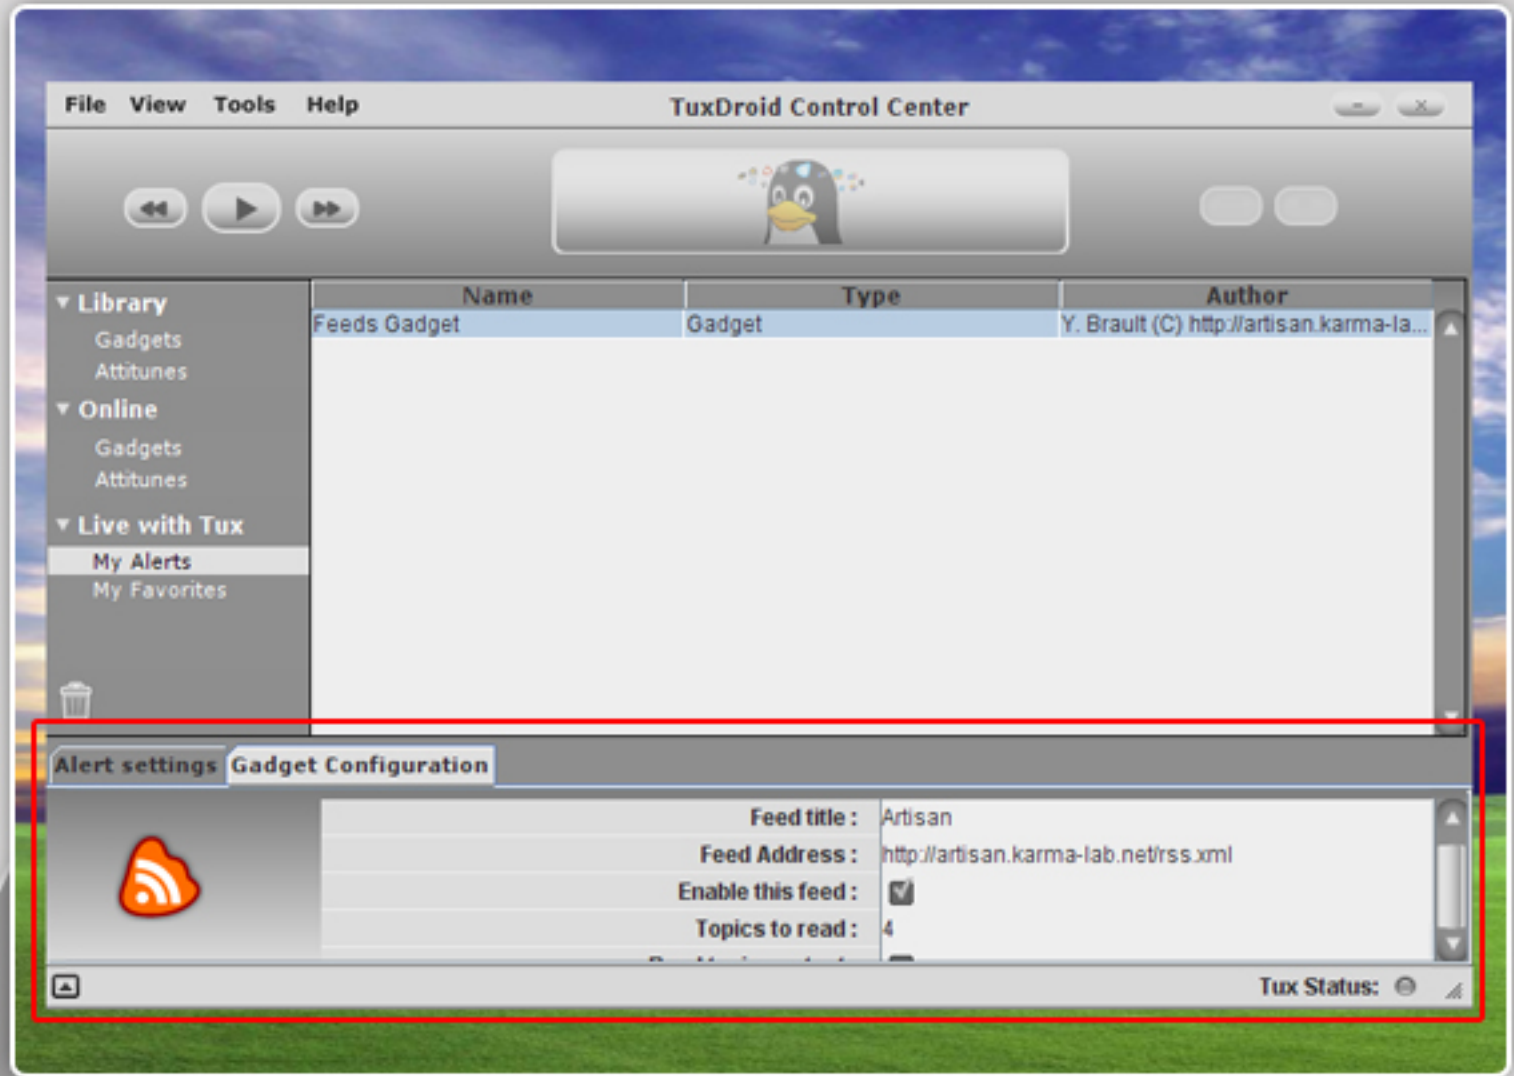

Configure when you want to launch an attitune or gadget. At a fixed time or every X minutes.

My Favorites

Dragging and dropping gadgets or attitunes into the Favorites folder will allow you to start them manually using the remote control with Tux or using the flippers of Tux.

11

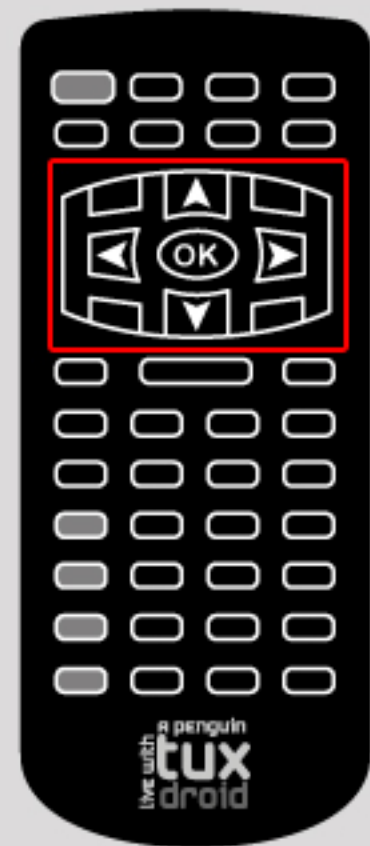

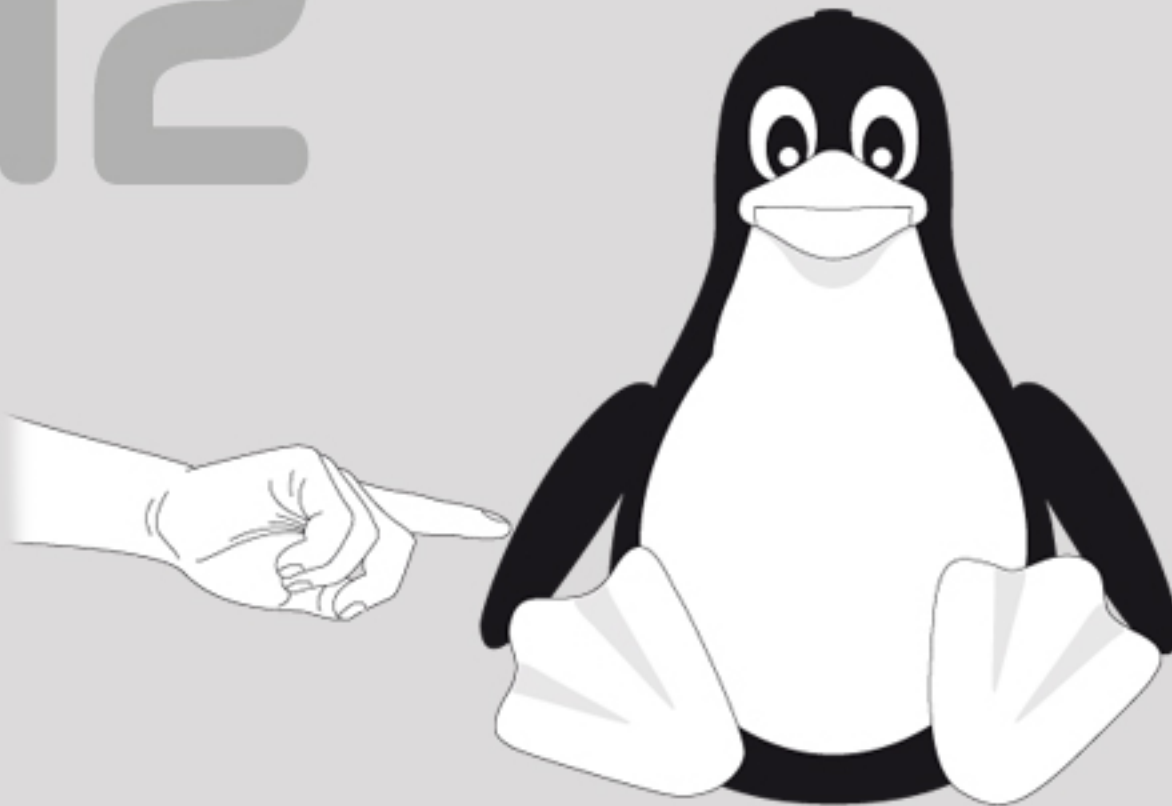

Gadget configuration

Every gadget can be configured by selecting the "Gadget Configuration" tab in the lower part of the Control Center.

12

Accessing Favorites

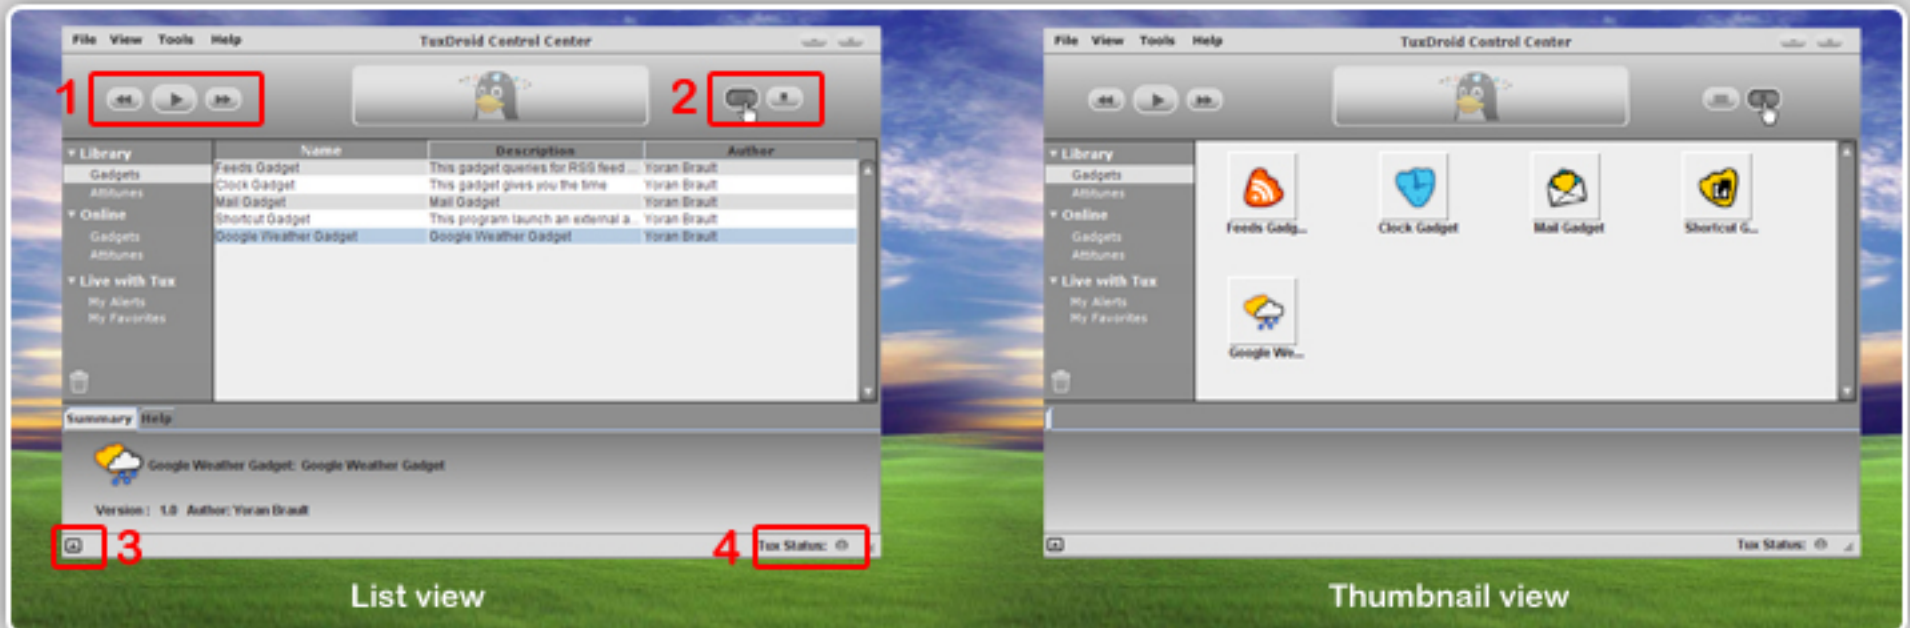

In order to access gadgets or attitunes located in "My Favorites" you can use the remote control or Tux.

For the remote control: use the arrow up and down button on the remote to browse the items.
Use the OK button to start the item.

Using Tux himself: Push the right and left flipper to browse the items, push the head button to launch it.

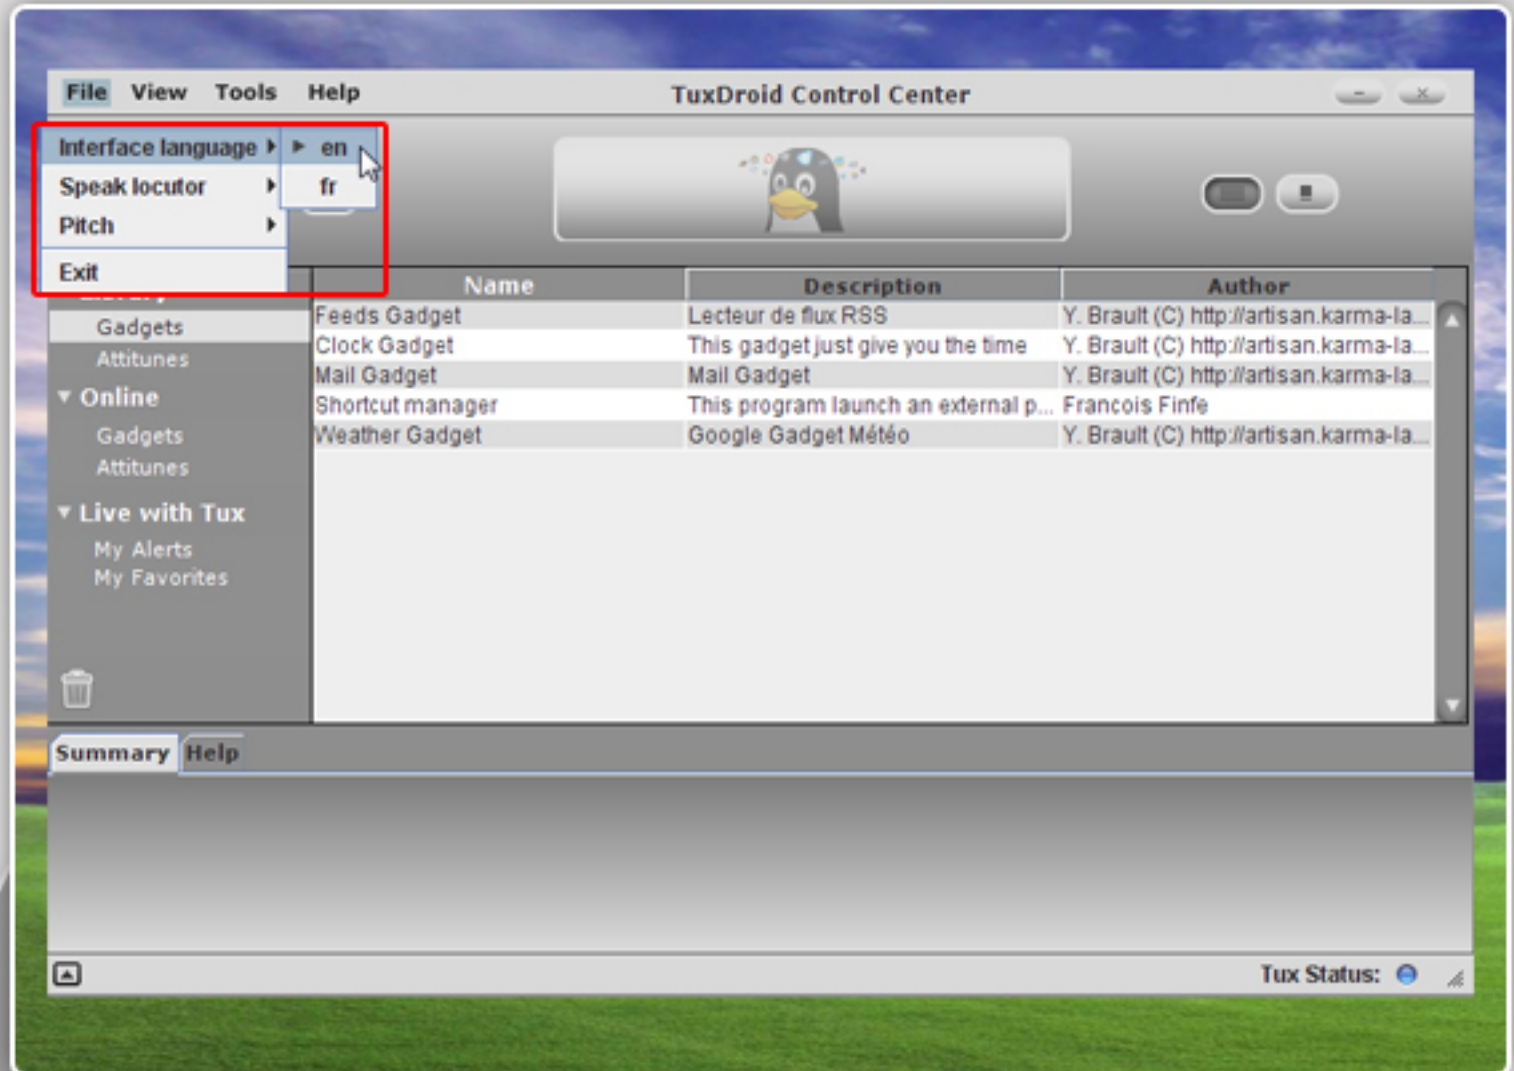

13

1. Browse and launch items in the Control Center.
2. Select list or thumbnail display mode.
3. Hide/Unhide lower pane of the Control Center.
4. The blue light displays if Tux is connected to the PC.

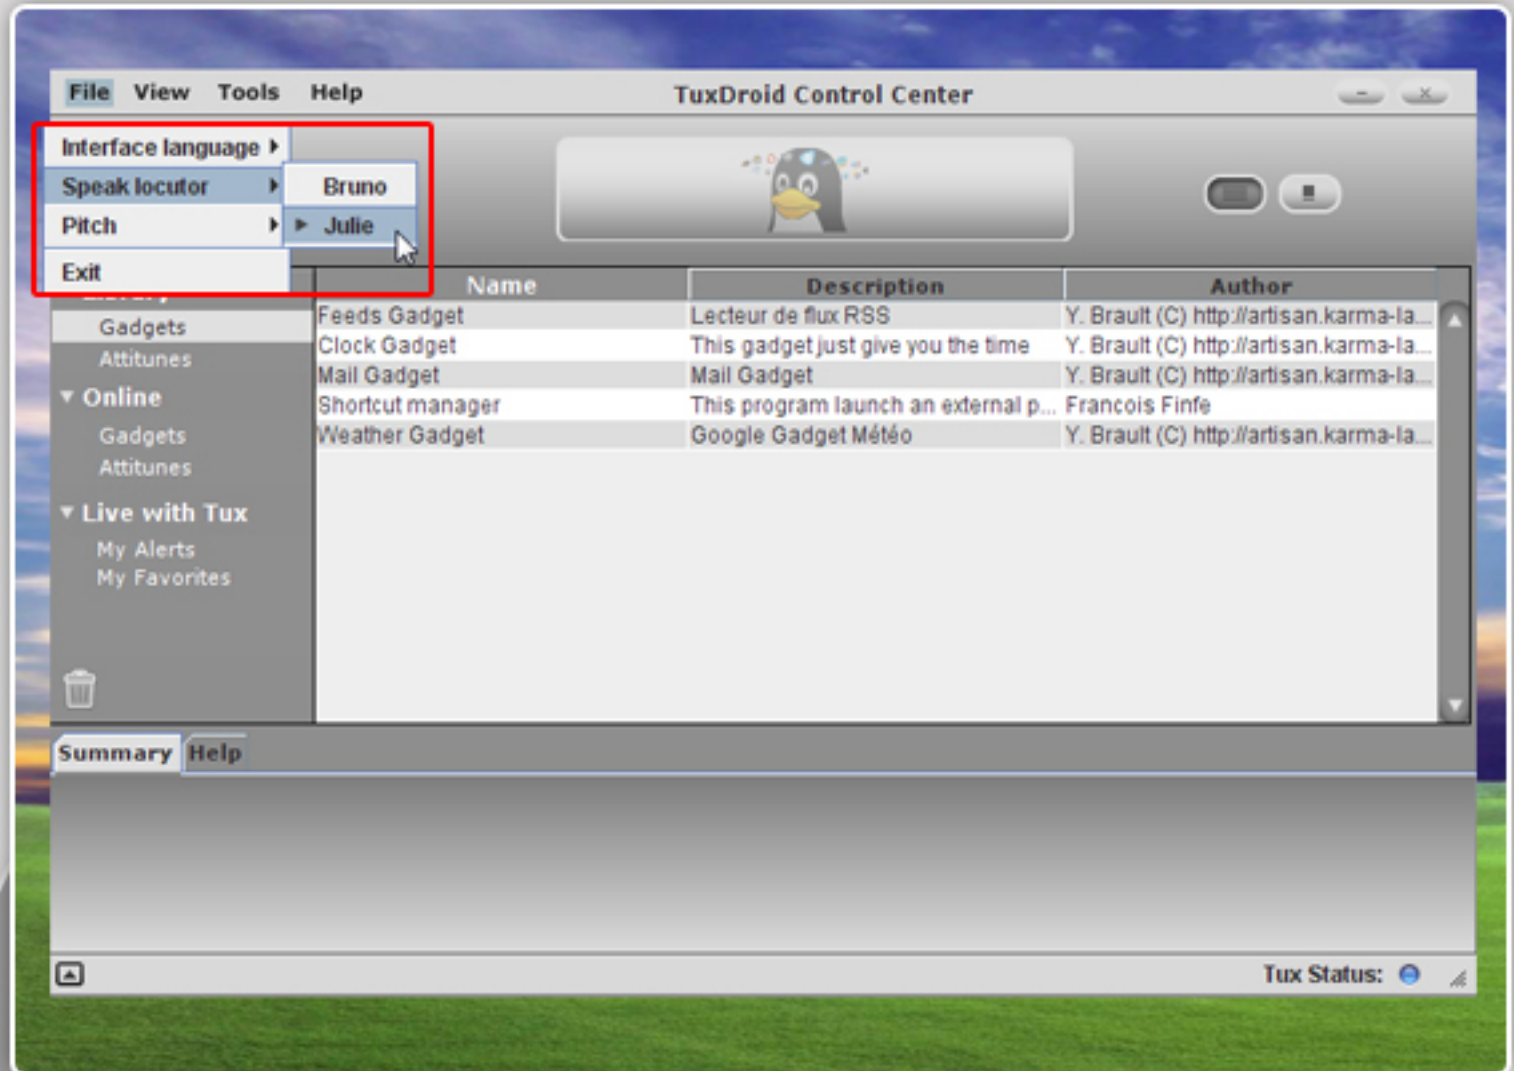

Choose the language of your interface.

You can choose different languages for the interface of the control center.

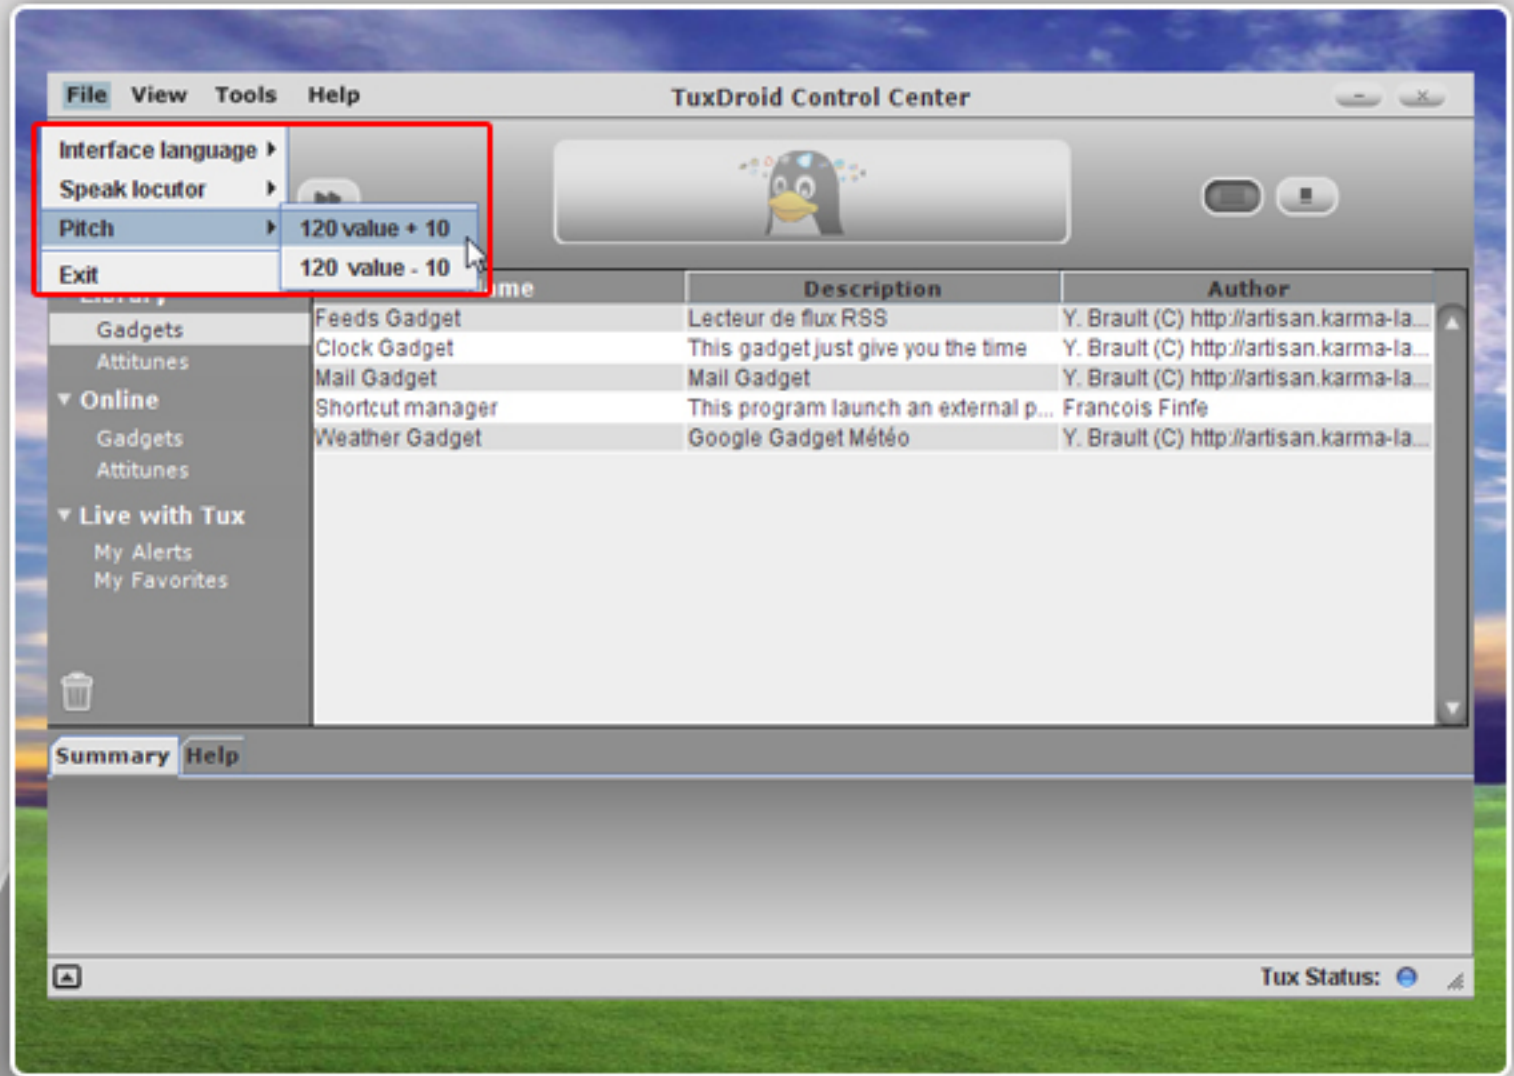

15

Next, you have the choice between two voices: female or male.

16

You may also pitch the voice to bring more fun to Tux Droid.
